The evaluation of IT and its business value are the subject of many academic and business discussions. Investments in IT are growing extensively and business managers worry about the fact that the benefits might not be as high as expected. This phenomenon is often called the IT investment paradox or the IT Black Hole: large sums are invested in IT that seem to be swallowed by a large black hole without rendering many returns. How to measure the benefits of IT is the concern of this book titled *Information Technology Evaluation Methods and Management*. The different IT evaluation approaches and methods are discussed and illustrated with cases: traditional financial evaluations such as the return on investment, information economics and the recently introduced IT Balanced Scorecard. The latter approach is proposed as an ideal mechanism to support the IT business alignment process and its related IT governance process. Among some of the topics included in this book are software measurement, ERP project evaluation, strategic electronic commerce evaluation. *Managing Information Technology Resources in Organizations in the Next Millennium* Information Resources Management Association. International Conference, 1999-01-01. *Managing Information Technology Resources in Organizations in the Next Millennium* contains more than 200 unique perspectives on numerous timely issues of managing information technology in organizations around the world. This book featuring the latest research and applied IT practices is a valuable source in support of teaching and research agendas. **Management Information Systems for Microfinance** Arvind Ashta, 2015-10-19. Microfinance is a double bottom line sector which is growing fast, making money and doing well in a variety of socially interesting ways. The growth of its institutions requires good strategies, good control systems and informed decision making, all of which require an appropriate Management Information System (MIS). While a good MIS is needed in any sector, the management of a double bottom line requires systems which yield information on economic, financial and social metrics. The essays in this book explore the metrics required for success in this field. Communicating on these metrics may provide competitive advantage in fund raising. Reaching out to the bottom of the pyramid requires low cost catalytic innovations disrupting the existing way of doing things. These necessitate not only social innovations but also technological innovations to reduce costs drastically. The book presents various alternative ways of distributing software for microfinance, including case studies on open source and cloud based software, indicating how software providers are seeking to create competitive advantage. It offers a detailed analysis of the problems that are often faced and innovative techniques for implementing MIS in microfinance. This volume represents essential reading for anyone interested in learning about not only microfinance and MIS but also social innovations and competitive advantage strategies. The contributors to the book are executives, consultants and academics who have considerable research

experience in working and researching in these areas Their work has been reviewed and developed by comments from both academics and practitioners to yield a book which is useful to students academics and practitioners alike The History and Function of the Target Cities Management Information Systems Matthew G Hile,1998-05-04 In The History and Function of the Target Cities Management Information Systems you ll travel to six major cities in the Target Cities demonstration project sponsored by the Substance Abuse and Mental Health Services Administration s Center for Substance Abuse Treatment CSAT You ll see how treatment centers are developing automated management information systems that have been proven to more effectively and efficiently meet the needs of patients requiring addiction recovery and treatment in large metropolitan areas Your understanding of what it takes to develop run and maintain automated management information systems will increase as you read these firsthand accounts of specialists who have taken their own systems through the stages of initial development to ongoing maintenance and to eventual evolution The History and Function of the Target Cities Management Information Systems provides an excellent forum of discovery in which you have everything you need to fully compare and contrast how various local conditions have impacted the growth of these cities information systems and how individual problems can be solved Several real world views of these and many other specific topics in these metropolitan areas of the country are at your fingertips how central intake sites provide rapid assessment referral and care management in Cleveland Ohio facilitating automated client assessment referral and service tracking in Portland Oregon how central intake units CIUs and a computerized management information system MIS reduce barriers to treatment entry increase treatment retention and support continued posttreatment recovery in Dallas Texas the St Louis Missouri information system that was conceptualized and implemented statewide the patient tracking system PTS in New Orleans Louisiana lessons learned in Detroit Michigan by staff using a management information system with a terminal host model and character based user interface This is the only known published description of automated systems being developed for the same purpose by different teams Everyone especially hospital administrators educators and behavioral health and computer professionals interested in the development of automated medical records systems will definitely want to access the valuable information garnered from six important cities in The History and Function of the Target Cities Management Information Systems By comparing and contrasting the true to life accounts of these different cases you ll gain a richer deeper understanding of this type of software and system development process You ll also acquire the insight necessary to spearhead the construction and modification of an effective efficient assessment and case management system in your own city **MANAGEMENT INFORMATION SYSTEM** Dr. Sourabh Sharma & Prof. K.
