**Transforming the Organization** Howard W. Oden, 1999-11-30 The rapidly increasing rate of world change demands not just incremental change that organizations have used in the past but fast radical alterations of their strategy, culture, structure, and processes. Nothing less than transformation will do, says Dr. Oden, a complex continuing effort that may be closer to revolution than evolution. Oden lays it out in his customarily clear programmatic way. He covers actions that must precede the initiation of a transformation, guidance on how to perform the technical, social, and behavioral tasks, and the actions required to wrap up and integrate everything into a complete, workably transformed organization. His book provides a clear goal for the transformation, an excellent description of transformational leadership, and a simple, powerful model of the process. The result is essential reading for upper management in private and public sector organizations and for their colleagues in the academic community. Part I covers the preparatory actions that organizations should take before initiating a transformation without which the effort is doomed to failure, says Dr. Oden. In Part II, he covers the technical or engineering aspects of the transformation. First, he develops a process map of the organization as the basis for process improvement; then, he diagnoses the existing and future organization to determine how processes should be improved. In Part III, he looks at the various organizational change methods that are available, conducts a broad design of the total organization, and then designs the human resource support processes for the transformed organization. Finally, in Part IV, Dr. Oden shows how to incorporate the redesigned processes into the existing system, the most difficult part of the transformation, and ends by showing how better integration can be achieved to provide better overall transformational results.

**Managing (e)Business Transformation** Ali Farhoomand, M. Lynne Markus, Guy Gable, Shamza Khan, 2021-01-21 Managing e-Business Transformation comprises text and cases designed to show students how a business can be transformed into an internet-networked enterprise where IT infrastructures are used to link customers, suppliers, partners, and employees to create superior economic value. The book is written based on the premise that integrating internet technologies throughout the value chain is crucial to building and managing customer relationships. Importantly, it underscores the centrality of basic business and economic principles within the context of a networked environment. The book builds on established business and economic theories, concepts, and fundamentals to show that e-business will soon be synonymous with business. The book takes a strong managerial perspective, especially popular with MBA students, to argue that the internet is simply an enabling technology which allows firms to build the infrastructure needed to operate in an evolving business world. The application of theory concepts is emphasized throughout and contains a range of international case studies to enhance the learning experience. This book is a must for all students studying e-business strategy at undergraduate, MBA, and postgraduate level.
