

Managing scarce resources

- Since resources to produce goods and services are scarce a choice must be made to decide what to produce from them. For example, furniture and houses can be made from timber so a decision needs to be made whether to cultivate trees for furniture or houses.
- Similarly, if a government spends too much money on building skills then it will not be able to spend much on training extra doctors

Businesses must satisfy peoples' wants and needs.

People's needs are limited/finite – they include things that are needed to survive such as food, warmth, shelter and clothing. Others are psychological and emotional needs.

However wants are unlimited/infinite. People constantly aim for a better quality of life, which might include better housing, better health care, education, longer holidays etc.

Simpson, 1993 This volume addresses the topic of managing with scarce resources Contributions have been designed to assist those who direct institutional research those engaged in planning the use of resources and faculty leaders and higher education administrators both on campus and in broader higher education roles Institutional researchers and strategic planners can survey the areas in which research is needed and consider how they can facilitate decision making by supplying information and analysis and indentifying options Faculty leaders and administrators can benefit from the discussion of options that best further the basic objectives to be served in a period in which resources for higher education are particularly scarce Common-Property Arrangements and Scarce Resources Edward M. Barbanell, 2001-09-30 It is widely held that private ownership is the preferred end state for all scarce resources Those who hold this view have not looked closely enough at water in the American West Barbanell contends Because of water s special attributes private ownership is an ineffective means for protecting individuals interests Splitting the various rights of ownership between individual resources users and

the community to which they belong can better protect those interests Barbanell develops a conception of this form of common ownership a common property arrangement and shows that it can function effectively for water in the West More generally he offers an expanded framework for analyzing right relationships and examining problems related to resource scarcity Some economists argue that John Locke s account of property justifies the private ownership of water in the West Barbanell argues however that because Locke did not think carefully enough about the variable nature of resources his account does not support that conclusion Although economists recognize that private ownership may not be perfectly suited to all resources they are nonetheless skeptical about common ownership alternatives Barbanell shows that this skepticism is unwarranted When the rights relationship among members of a resource community is based on mutual expectations of reciprocal behavior then a common property arrangement can function effectively to control the degradation and depletion of a scarce resource Barbanell s argument that common ownership is a conceptually sound and politically viable alternative for water will be of particular interest to public policy makers environmentalists resource economists and political philosophers

Population Matters Nancy Birdsall, Allen C. Kelley, Steven W. Sinding, 2001 The effect of demography on economic performance has been the subject of intense debate in economics for nearly two centuries In recent years opinion has swung between the Malthusian views of Coale and Hoover and the cornucopian views of Julian Simon Unfortunately until recently data were too weak and analytical models too limited to provide clear insights into the relationship As a result economists as a group have not been clear or conclusive This volume which is based on a collection of papers that heavily rely on data from the 1980s and 1990s and on new analytical approaches sheds important new light on demographic economic relationships and it provides clearer policy conclusions than any recent work on the subject In particular evidence from developing countries throughout the world shows a pattern in recent decades that was not evident earlier countries with higher rates of population growth have tended to see less economic growth An analysis of the role of demography in the Asian economic miracle strongly suggests that changes in age structures resulting from declining fertility create a one time demographic gift or window of opportunity when the working age population has relatively few dependants of either young or old age to support Countries which recognize and seize on this opportunity can as the Asian tigers did realize healthy bursts in economic output But such results are by no means assured only for countries with otherwise sound economic policies will the window of opportunity yield such dramatic results Finally several of the studies demonstrate the likelihood of a causal relationship between high fertility and poverty While the direction of causality is not always clear and very likely is reciprocal poverty contributes to high fertility and high fertility reinforces poverty the studies support the view that lower fertility at the country level helps create a path out of poverty for many families Population Matters represents an important further step in our understanding of the contribution of population change to economic performance As such it will be a useful volume for policymakers both in developing countries and in international development agencies
