The Switch Process in Manic-depressive Illness National Institute of Mental Health (U.S.), William E. Bunney, William Krasner, Vivian R. Isenstein, 1978 Dr. William E. Bunney Jr. of the National Institute of Mental Health's Intramural Research Program has been investigating the biological causes of depression. He focused on a phenomenon called the switch mechanism. Noting that there is often a sudden, drastic, mercurial change from depressive episodes to manic phases, he studied these patients and theorized that elevated or reduced levels of the neurotransmitters norepinephrine and dopamine may be responsible for the sudden shift from the depressed, immobile state to the active, psychotic manic state and vice versa. The research described in this monograph has great significance for the control of disturbed behavior through medication and for understanding the trigger mechanism in the brain affected by environmental stresses. It is another step toward gathering the knowledge needed to alleviate the suffering of depressed persons.

Bipolar Disorder and Manic Depressive Illness Joann Jovinelly, 2001 When loss or illness strikes a family young people don't always have the experience to help them cope These seven new titles can help them find the strength and the resources to help them get through even the toughest situation While in casual conversation people may complain of having a manic day few realize the severity and suffering involved in living with bipolar disorder Here readers will learn the history of this mood disorder and how frequently it eludes diagnosis The author also reveals the connection between this pervasive cyclical disorder substance abuse suicide and interestingly artistic expression *Bipolar Puzzle Solution* Bryan L. Court, Gerald E. Nelson, 2013-08-21 In the U S approximately one percent of the population 2.6 million have a bipolar disorder also called manic depressive illness characterized by mood cycles of depression and mania excessive elation activity talkativeness etc Because bipolar illness has genetic tendencies it affects those from all walks of life but the majority of persons with the illness don't seek help Most have been misunderstood rejected shunned and disliked because of the disorder and they struggle against preconceived ideas and prejudices but all seek answers health freedom hope and love For someone with bipolar disorder education and knowledge about the illness are necessary for successful treatment Until now few road maps have been available In this book the pieces that compose the bipolar puzzle come together in a unique question and answer format Written by a bipolar sufferer co author Bryan L Court typical questions heard in bipolar support groups are provided and each is followed by an in depth answer Each topical section also includes an extensive Psychiatrist's Response by co author Gerald E Nelson M D who has been working with bipolar disordered individuals for over 20 years Covering the whole person physical emotional and spiritual components of recovery this book is essential for individuals suffering from bipolar disorder as well as their loved ones and helping professionals Answering questions about bipolar illness and how to live with it this book addresses 187 recovery related questions over the broad range of interest to the patient family and friend and utilizes the same question and answer format heard in bipolar support groups Subjects cover a wide spectrum including understanding the illness treatment methods medications attitudes acceptance faith living problems relationships with friends family and psychiatrists support groups disability hospitalization and employment difficulties The answers were obtained from a psychiatrist a labor law attorney and a hospital worker A psychiatrist Nelson reviewed the answers to the questions and provided a response to each section of the book *Depression, Manic-depressive Illness, and Biological Rhythms* Eunice Luccock Corfman, 1979 We have known for some time of the pervasive presence of rhythmic variation in most of the processes of the body and especially of those rhythms called circadian that is showing a periodicity of about 24 hours We have known less about the function and influence of these rhythms Now accumulating lines of evidence from several sources suggest that circadian rhythms may be associated with the affective mental disorders depression unipolar and manic depressive illness bipolar The hypothesis is proposed that these psychoses may be linked to biological rhythms which are out of phase with each other or to failures in their synchronization with the external day night cycle That episodes

of these illnesses are recurrent had been noticed anecdotally for many years but not persuasively documented until recently in studies such as those described here The hypothesis is consistent with the finding of a high proportion of recurring episodes in patients with affective illnesses Many of the findings reviewed here are from clinical data If replicative and new investigations continue to support the conclusions suggested by these current findings the implications for diagnosis prevention and treatment of these disorders are considerable This Science Report bringing together these diverse sources of data helps us weigh and assess their significance Such a Report also accomplishes the task of what is now sometimes called technology transfer a conscientious effort to ensure that the findings of research funded by public money are promptly disseminated to health professionals who may put those findings to use and also to the interested general public in accessible form
