Manifesting Medicine Artifacts:

Plato's Republic Stanley Rosen, 2008-01-01 In this book a distinguished philosopher offers a comprehensive interpretation of Plato's most controversial dialogue Treating the Republic as a unity and focusing on the dramatic form as the presentation of the argument Stanley Rosen challenges earlier analyses of the Republic including the ironic reading of Leo Strauss and his disciples and argues that the key to understanding the dialogue is to grasp the author's intention in composing it in particular whether Plato believed that the city constructed in the Republic is possible and desirable Rosen demonstrates that the fundamental principles underlying the just city are theoretically attractive but that the attempt to enact them in practice leads to conceptual incoherence and political disaster The Republic says Rosen is a vivid illustration of the irreconcilability of philosophy and political practice

Cabinets for the Curious Ken Arnold, 2017-03-02 The last few years has within museums witnessed nothing short of a revolution Worried that the very institution was itself in danger of becoming a dusty forgotten culturally irrelevant exhibit vigorous efforts have been made to reshape the museum mission Fearing that history was coming to be ignored by modern society many institutions have instead marketed a de intellectualised heritage overly relying on computer technology to captivate a contemporary audience The theme of this work is that we can do much to reassess the rationale that inspires contemporary collections through a study of seventeenth century museums England's first museums were quite literally wonderful founded that is on the disciplined application of the faculty of wonder The type of wonder employed was not that post Romantic idea of disbelief but rather an active form of curiosity developed during the Renaissance particularly by the individuals who set about gathering objects and founding museums to further their enquiries The argument put forward in this book is that this museological practice of using objects actually to create as well as disseminate knowledge makes just as much sense today as it did in the seventeenth century and further that the best way of reinvigorating contemporary museums is to return to that form of wonder By taking such a comparative approach this book works both as a scholarly historical text and as an historically informed analysis of the key issues facing today's museums As such it will prove essential reading both for historians of collecting and museums and for anyone interested in the philosophies of modern museum management

The San Francisco Western Lancet. a Journal of Practical Medicine and Surgery, 1872 *Relics, Ritual, and Representation in Buddhism* Kevin Trainor, 1997-06-13 This book is a serious study of relic veneration among South Asian Buddhists Drawing on textual sources and archaeological evidence from India and Sri Lanka including material rarely examined in the West it looks specifically at the practice of relic veneration in the Sri Lankan Theravada Buddhist tradition The author portrays relic veneration as a technology of remembrance and representation which makes present the Buddha of the past for living Buddhists By analysing the abstract ideas emotional orientation and ritual behaviour centred on the Buddha's material remains he contributes to the rematerializing of Buddhism which is currently under way among Western

scholars This book is an excellent introduction to Buddhist relics It is well written and accessible and will be read by scholars and serious students of Buddhism and religious studies for years to come **Artifacts & Illuminations** Tom Lynch, Susan Naramore Maher, 2012-04-01 Loren Eiseley 1907-77 is one of the most important American nature writers of the twentieth century and an admired practitioner of creative nonfiction A native of Lincoln Nebraska Eiseley was a professor of anthropology and a prolific writer and poet who worked to bring an understanding of science to the general public incorporating religion philosophy and science into his explorations of the human mind and the passage of time As a writer who bridged the sciences and the humanities Eiseley is a challenge for scholars locked into rigid disciplinary boundaries *Artifacts and Illuminations* the first full length collection of critical essays on the writing of Eiseley situates his work in the genres of creative nonfiction and nature writing The contributing scholars apply a variety of critical approaches including ecocriticism and place oriented studies ranging across prairie urban and international contexts Contributors explore such diverse topics as Eiseley's use of anthropomorphism and Jungian concepts and examine how his work was informed by synecdoche Long overdue this collection demonstrates Eiseley's continuing relevance as both a skilled literary craftsman and a profound thinker about the human place in the natural world *Ethnomathematics* Ubiratan D'Ambrosio, 2006-01-01 In this book Ubiratan D'Ambrosio presents his most recent thoughts on ethnomathematics a sub field of mathematics history and mathematics education for which he is widely recognized to be one of the founding fathers In a clear concise format he outlines the aim of the Program Ethnomathematics which is to understand mathematical knowing doing throughout history within the context of different groups communities peoples and nations focusing on the cycle of mathematical knowledge its generation its intellectual and social organization and its diffusion While not rejecting the importance of modern academic mathematics it is viewed as but one among many existing ethnomathematics Offering concrete examples and ideas for mathematics teachers and researchers D'Ambrosio makes an eloquent appeal for an entirely new approach to conceptualizing mathematics knowledge and education that embraces diversity and addresses the urgent need to provide youth with the necessary tools to become ethical creative critical individuals prepared to participate in the emerging planetary society **Exposing Electronics** Bernard Finn, 2000-12-21 It is clear that artifacts have the power to provoke thought inspire action and arouse passions There is evidence of this in the ever increasing number of museums as well as in the ability of those museums to stimulate controversy through exhibits As a consequence much has been written analyzing the interaction between objects and museum visitors Less well recognized or understood is the value of objects for historical research In this series of books we propose to show by example how artifacts can be employed in the study of the history of science and technology in ways ranging from motivating a line of research to providing hard evidence in the solution of an otherwise insoluble problem The first volume focused on medicine in this the second volume the topic our authors address is electronics As readers will discover there is considerable scope in the range of topics and in the range of uses of artifacts

oblivion The result is that although most children are likely to be familiar with images of heroic scientists such as Einstein and Darwin they rarely learn about the messy day to day practice of science in which scientists are ordinary humans Surprisingly the process by which this imagination of science in education occurs has rarely been theorized This is all the more remarkable since great thinkers tend to agree that the formation of images imagination is at the root of how human beings modify their material world Hence this process in school science is fundamental to the way in which scientists being the successful agents in of science education actually create their own scientific enterprise once they take up their professional life One of the first to examine the topic this book takes a theoretical approach to understanding the process of imagining science in education The authors utilize a number of interpretive studies in both science and science education to describe and contrast two opposing forces in the imagination of science in education epicization and novelization Currently they argue the imagination of science in education is dominated by epicization which provides an absolute past of scientific heroes and peak discoveries This opens a distance between students and today s scientific enterprises and contrasts sharply with the wider aim of science education to bring the actual world of science closer to students To better understand how to reach this aim the authors offer a detailed look at novelization which is a continuous renewal of narratives that derives from dialogical interaction The book brings together two hitherto separate fields of research in science education psychologically informed research on students images of science and semiotically informed research on images of science in textbooks Drawing on a series of studies in which children participate in the imagination of science in and out of the classroom the authors show how the process of novelization actually occurs in the practice of education and outline the various images of science this process ultimately yields
