Manipulation Of Growth In Farm Animals:

Manipulation of Growth in Farm Animals J.F. Roche,D. O'Callaghan,2012-12-06 In some countries especially on the European continent there still exists a remarkable veal market This type of meat production seems irrespective of any economic forecasts to remain unchallenged so long as consumers expect that restaurants should offer courses like r6ti de veaux vitello a la casa or Kalbsschnitzel Producers at least since about the past 1 2 decades have been aware of the beneficial effect of anabolic agents in veal production This is possible due to the lack of endogenous sexual hormones during the juvenile or prepuberal status of these animals A discussion about the benefit risk evaluation in connection with the use of anabolic agents in general was promoted in recent years by the public This concern occurred concomitantly with the detection of illegally treated veal calves and the occurrence of diethylstilbestrol DES residues in canned food containing veal The aim of this paper is to summarize the present status of residue data in edible tissues and excreta in order to allow the evaluation of the risk given in the paper of Hoffmann within this program and to consider reasonable monitoring measures We have to face the fact that without an efficient control system the illegal treatment of calves can not be excluded Therefore this paper will not only consider different compounds and formulations but will also deal with practised routes of administration

Campion, Gary J. Hausman, Roy J. Martin, 2013-11-11 The biotechnological advances of recent years have put us on the brink of unprecedented gains in animal productivity Manipulation of animal growth rate and composition of gain is now possible by a variety of techniques Examples include ingestion of beta adrenergic agonists injection of somatotropin castration immunization and gene insertion Animal Growth Regulation addresses modern concepts of growth regulation with an emphasis on agriculturally important animals This emphasis is not exclusive as many situations exist in which the only information available was generated in other species and this information has been included for the sake of clarity and completeness However because of the overall orientation of this volume particular attention has been given to the regulation of skeletal muscle adipose tissue and bone growth Certain hormones and growth factors have a profound influence on growth regulation and this basic physiological knowledge is being harnessed to manipulate growth Thus considerable emphasis has been given to growth hormone somatomedin-like

Producers at least since about the past 12 decades have been aware of the beneficial effect of anabolic agents in veal production. This is possible due to the lack of endogenous sexual hormones during the juvenile or prepubertal status of these animals. A discussion about the benefit risk evaluation in connection with the use of anabolic agents in general was promoted in recent years by the public. This concern occurred concomitantly with the detection of illegally treated veal calves and the occurrence of diethylstilbestrol (DES) residues in canned food containing veal. The aim of this paper is to summarize the present status of residue data in edible tissues and excreta in order to allow the evaluation of the risk given in the paper of Hoffmann within this program and to consider reasonable monitoring measures. We have to face the fact that without an efficient control system the illegal treatment of calves can not be excluded. Therefore this paper will not only consider different compounds and formulations but will also deal with practised routes of administration.

Biotechnology in Growth Regulation R.B. Heap, C.G. Prosser, G.E. Lamming, 2013-10-22. Biotechnology in Growth Regulation focuses on mechanisms of action of growth hormones and how immunological and transgenic procedures can affect growth response. The book first examines species specificity and structure function relationship of growth hormones. Microheterogeneity of growth hormones, variations in amino acid sequence and biological properties of growth hormones and structure function relationship are discussed. The text also looks at growth hormone receptors and binding proteins, regulation of growth hormone receptors, modulations of growth hormone release and neuroregulation of growth hormone secretion. The book then discusses the role of growth hormones in the regulation of adipocyte growth and function. Chronic effects of growth hormones on insulin action and lipid synthesis, effects of growth hormones on lipolysis and adipogenesis are also described. The text looks at growth promoting properties of recombinant growth hormones and mechanisms by which porcine growth hormone enhances growth in pigs. The book also highlights the direct effects of growth hormones on osteogenesis and chondrogenesis, action of IGF I on mammary function, antigen antibody complexes that enhance growth and transgenics. The text also presents experiments that show the effects of growth hormones on animals. The book is a good source of information for readers wanting to study growth hormones.
