General Principles and Etiology James Wilson, 2013-06-29 In less than 40 years teratology has grown from a little known discipline concerned with studies on the effects of a few physical and chemical stresses on developing fish amphibians and birds to a discipline embracing a vast accumulation of literature on experimental studies in many animal forms and the results of intensive scrutiny of human development under varied conditions as well Emphasis has shifted from preoccupation

with descriptions of anatomical defects to concern about subtle and interacting causative factors to searches for the early reactions to these at the cellular and subcellular levels and to identification of abnormality in the chemical the functional and the ultrastructural realms These changes in orientation have quite naturally made necessary the recruitment of concepts methods and expertise from other disciplines Hence the foundations of teratology which once were largely morphological have extended into genetics biochemistry molecular biology reproductive physiology epidemiology and several aspects of veterinary and clinical medicine It is not surprising that a student or new investigator approaching the field of teratology may feel some dismay when confronted with the confusing array of cross disciplinary concepts and principles it encompasses today One of the aims of this work is to introduce what the editors believe is a logical thread of continuity into a field that may be regarded by some as a welter of disordered information 〇〇〇〇〇〇〇〇〇〇〇〇〇〇〇〇〇〇〇〇〇〇 〇〇〇〇〇〇〇 (Japan),197?

Issues and Reviews in Teratology Harold Kalter,2012-12-06 A growing sophistication of the American populace about the nature and realities of the impact of the environment on prenatal development was not much in evidence in 1983 Continuing accusations against Agent Orange and Bendectin highlight what must be a deep credulousness and need to blame others for one's biological misfortunes We despair that ignorance and nonaccountability can be dissipated by objective means But one can only learn and teach and hope The need to know what causes congenital malformations becomes more imperative as they become the last major holdout the most unyielding of all the reasons babies still die and are seriously ill In the aggregate congenital malformations are now the cause of about one third of the deaths of infants less than one month old and one fifth of the deaths of those under one year old up 50% in the last two decades In the instance of one suspected cause of congenital malformations maternal insulin dependent diabetes mellitus while the perinatal mortality rate of children of such women has gone down greatly since World War II the fraction of deaths due to congenital malformations has grown correspondingly and is now approaching 50% Present day knowledge of the causes of congenital malformations is most imperfect A recent authoritative review found that there is understanding to one extent or another of the causation of less than half of all congenital malformations **Teratology and Congenital Malformations: KWIC**

index, Mephenesin-Zymogram. Author index Lois Weinstein,1976 Over 14 000 entries to international literature on congenital malformations caused by a variety of agents Includes journal articles books book reviews symposia proceedings and abstracts from meetings Consists of retrospective searches undertaken in 1962 by Lederle Laboratories plus all references in Lederle's journal titled Teratogenicity mutagenicity and carcinogenicity 1963 1973 Emphasizes experimental work but also includes clinical Accession number arrangement Entries include bibliographical information abbreviation of foreign language and secondary source KWIC author indexes Male Fertility and Its Regulation E.S. health care on both national and individual levels To focus on this and related problems an International Congress to examine many aspects of male and female Reproductive Health Center Care was held on 10-15 October 1982 in Maui Hawaii USA This volume is a result of the proceedings from the Symposium on Male Fertility and its Regulation which was a part of the Reproductive Health Care Congress The organizers of this symposium recognized the need to focus male reproductive understanding on contraceptive development The ultimate objective was and still is to produce a variety of safe and effective male contraceptives similar to that accomplished in the female Speakers were invited to review the state of the art in several areas related to male contraception reproductive toxicity and reproductive biology The abstracts of these sessions were published as a special issue of Archives of Andrology Vol 9 No 1 August 1982 Subsequently this volume was assembled from key papers presented at the Symposium Additionally invited manuscripts from leaders in specific areas were solicited to provide additional range to the topics covered Chemically Induced Birth Defects James Schardein, 2000-04-11 This thoroughly revised and updated reference addresses the drugs and chemicals causing malformations and congenital anomalies in the human fetus comprehensively reviewing experimental studies in animals and clinical data on human development primarily in the organogenesis period Addressing current public health concerns over teratogens Chemical *Comparative Pathology Bulletin*, 1969
