Kyle Petersen, 2015-10-12 This text presents the Eulerian numbers in the context of modern enumerative algebraic and geometric combinatorics The book first studies Eulerian numbers from a purely combinatorial point of view then embarks on a tour of how these numbers arise in the study of hyperplane arrangements polytopes and simplicial complexes Some topics include a thorough discussion of gamma nonnegativity and real rootedness for Eulerian polynomials as well as the weak order and the shard intersection order of the symmetric group The book also includes a parallel story of Catalan combinatorics wherein the Eulerian numbers are replaced with Narayana numbers Again there is a progression from combinatorics to geometry including discussion of the associahedron and the lattice of noncrossing partitions The final chapters discuss how both the Eulerian and Narayana numbers have analogues in any finite Coxeter group with many of the same enumerative and geometric properties There are four supplemental chapters throughout which survey more advanced topics including some open problems in combinatorial topology This textbook will serve a resource for experts in the field as well as for graduate students and others hoping to learn about these topics for the first time *Editing Digital Film* Jaime Fowler, 2012-11-12 At long last film and video editors are using the same systems to edit their projects and *Editing Digital Film* is the guide to show them how to do it This concise reference provides video and film editors familiar with the Avid Media 100 and Final Cut Pro systems with crucial information they will need to edit on all three of these systems In addition to showing film editors and directors working on DV projects how to edit for this new format this text also clarifies the NLE process to those familiar with traditional film editing With its focus on the essentials of integrating nonlinear editing with film *Editing Digital Film* is an excellent resource for video editors wishing to edit films and for film editors wishing to learn how films are integrated into nonlinear systems With coverage the film cutting process post production methods telecine matchback editing HDTV 24P cutting DV and all necessary tools to get the job done this is the perfect guide for those interested in editing digital film *Number Calculations* Frances Mosley, June Loewenstein, 1997 *Guitar Identification* A. Hill, 2022-01-11 The First Chapters uncovers the origins of the first paragraph or chapter divisions in copies of the Christian Scriptures Its focal point is the magnificent fourth century Codex Vaticanus Vat gr 1209 B 03 perhaps the single most significant ancient manuscript of the Bible and the oldest material witness to what may be the earliest set of numbered chapter divisions of the Bible The First Chapters tells the history of textual division starting from when copies of Greek literary works used virtually no spaces marks or other graphic techniques to assist the reader It explores the origins of other numbering systems like the better known Eusebian Canons but its theme is the first set of numbered chapters in Codex Vaticanus what nineteenth century textual critic Samuel P Tregelles labelled the Capitulatio Vaticana It demonstrates that these numbers were not as most have claimed late additions to the codex but belonged integrally to its original production The First Chapters then breaks new ground by showing that the Capitulatio Vaticana has real precursors in some much earlier manuscripts It thus casts light on a long continuous tradition of scribally placed visual guides to the reading and interpreting of Scriptural books Finally The First Chapters exposes abundant new evidence that this early system for marking the sense divisions of Scripture has played a much greater role in the history of exegesis than has previously been imaginable

The Ciphers of the Monks David A. King, 2001 This is the first comprehensive study of an ingenious number notation from the Middle Ages that was devised by monks and mainly used in monasteries A simple notation for representing any number up to 99 by a single cipher somehow related to an ancient Greek shorthand first appeared in early 13th century England brought from Athens by an English monk A second more useful version due to Cistercian monks is first attested in the late 13th century in what is today the border country between Belgium and France with this any number up to 9999 can be represented by a single cipher The ciphers were used in scriptoria for the foliation of manuscripts for writing year numbers preparing indexes and concordances numbering sermons and the like and outside the scriptoria for marking the scales on an astronomical instrument writing year numbers in astronomical tables and for incising volumes on wine barrels
