Hartmann, Reinhart Leitinger, 2012-12-06 Especially due to the increasing environmental problems there is a need to collect as many data as possible in the upper atmosphere This book serves as a general multidisciplinary guide and introduction for a more effective use of the large amount of now available data from the Earth's atmosphere It also shows the problems of the use of large

amounts of time series data for basic science as well as for environmental monitoring and the related information systems The book is aimed for scientists and students interested in the Earth's atmosphere which is vital for the understanding of environmental changes in the global system Earth Computerization and Networking of Materials Databases Thomas Ian Barry, K.
