PAHs An Ecotoxicological Perspective:

PAHs Peter E. T. Douben, 2003-07-25 Polycyclic aromatic hydrocarbons PAHs or polyarenes are one of the largest and most structurally diverse class of organic molecules known. High percentages of polyarenes representing a wide range of molecular sizes and structural types are present in coal tars and petroleum residues. The major sources of PAHs are crude oil, coal and oil shale. The fuels produced from these fossil sources constitute the primary source of energy for the industrial nations of the world and the petrochemicals from these raw materials are the basis of the synthetic fibre and plastics industries. PAHs are however widespread pollutants and their impact on the environment and human health must be monitored and controlled. This book will review and assess our scientific understanding of the ecological exposure and effects PAHs have in different environments and habitats. It will accomplish this by taking the recipients of the pollution in the environment as starting points and working its way back through pathways to access what is required for our understanding of effects and rationale for control. Although this book will concentrate on ecological exposure of PAHs, the general impacts of PAHs on human populations will be touched upon. It is thought to be the first book to focus on the ecological aspects of PAHs.

Ecotoxicology Erik Jorgensen, 2010-04-16 Ecotoxicology offers an overview of current ecotoxicological problems. It includes basic ecotoxicological concepts as well as information about chemicals and toxic substances that may cause harmful effects on the ecosystem and its living components. The book with a total of 48 chapters is divided into three parts. The first part includes the basic concepts of ecotoxicology starting with an introductory chapter on ecotoxicology as a subdiscipline of ecology, assessment of ecotoxicological effects and risk and properties and effects of toxic chemicals. These topics are further discussed throughout the book along with nomenclature, focal topics and the history of ecotoxicology. The two remaining parts tackle harmful properties and harmful chemicals. The second part also covers bioaccumulation, bioavailability, biodegradability, biodegradation and biomagnification. It also provides models for ecotoxicological populations, ecosystems and landscapes and on food web bioaccumulation. Chemicals including benzene, copper, lead, nitrogen, phenols, pheromones, phthalates, plutonium and uranium are covered in separate chapters in the final part. This book will be of great value to ecologists, ecotoxicologists and environmental managers. Provides an overview of the theory and application of global ecology. International focus and range of ecosystems makes Ecotoxicology an indispensable resource to scientists. Based on the bestselling Encyclopedia of Ecology. Full color figures and tables support the text and aid in understanding.

Fundamentals of Ecotoxicology Michael C. Newman, 2019-11-27 This new edition is revised throughout and includes new and expanded information on natural resource damage assessment, the latest emerging contaminants and issues and adds new international coverage including case studies and rules and regulations. The text details key environmental contaminants, explores their fates in the biosphere and discusses bioaccumulation and the effects of contaminants at increasing levels of ecological organization. Vignettes written by experts illustrate key themes or highlight especially
