seems likely to have a very significant effect on student achievement teachers practices and beliefs has received little attention This book reports results from a research program that sought to develop and employ research methods to compare teachers practices and beliefs across Canada It provides insight into the challenge of such research and describes teachers contexts beliefs and practices and how they differ in four regions and across two languages Using a multivocal ethnography approach Tobin 1999 teachers were involved in the preparation and discussion of videos of their own teaching and that of others This approach resulted in not only insights into the teachers pedagogies and practices but also opportunities for the teachers to reflect on their own teaching in new ways and for researchers to reflect on research practices and orientations The work is innovative in several ways In a field crowded with research on teachers practices beliefs and knowledge this research helps to unearth the implicit values that underlie the way teachers see teaching itself Through the process of observation of each other s practice the teachers became aware of their own pedagogies giving them new insights into their values and practices Researchers also engaged in a parallel process of reflection on their own practices as observers of teachers with similar insights into the values guiding their work This book will be of interest to government policy makers teachers and teacher educators as well as researchers in Mathematics Education Members of the AERA SIG in Research in Mathematics Education the Canadian Mathematics Education Study Group the NCTM and provincial Mathematics teacher associations are potential readers Praise for Researching Pedagogy and Practice with Canadian Mathematics Teachers What a treasure This book is an important resource for anyone interested in high quality mathematics teaching It fills a gap in our understanding of how mathematics is taught across Canada where students are among the highest performing on international mathematics assessments The studies reported are conceptually grounded methodologically rigorous and filled with nuanced observations of the similarity and variation in classroom teaching across many of the Canadian provinces Edward A Silver Senior Associate Dean for Research Graduate Studies William A Brownell Collegiate Professor of Education Professor of Mathematics University of Michigan
