Myslobodsky, 2013-06-17 Recently there has been a renewal of interest in the broad and loosely bounded range of phenomena called deception and self deception This volume addresses this interest shared by philosophers social and clinical psychologists and more recently neuroscientists and cognitive scientists Expert contributors provide timely reliable and

insightful coverage of the normal range of errors in perception memory and behavior They place these phenomena on a continuum with various syndromes and neuropsychiatric diseases where falsehood in perception self perception cognition and behaviors are a peculiar sign Leading authorities examine the various forms of mythomania deception and self deception ranging from the mundane to the bizarre such as imposture confabulations minimization of symptomatology denial and anosognosia Although the many diverse phenomena discussed here share a family resemblance they are unlikely to have a common neurological machinery In order to reach an explanation for these phenomena a reliable pattern of lawful behavior must be delineated It would then be possible to develop reasonable explanations based upon the underlying neurobiological processes that give rise to deficiencies designated as the mythomaniacs The chapters herein begin to provide an outline of such a development Taken as a whole the collection is consistent with the emerging gospel indicating that neither the machinery of nature nor the forces of nurture taken alone are capable of explaining what makes cognition and behaviors aberrant *Brentano's Book Chat* ,1916 **World's Best One Hundred Detective Stories (Ten Volumes)** ,1929
