McDysan, 2000 High-Performance Backbone Network Technology Naoaki Yamanaka, 2020-04-01 Compiling the most influential papers from the IEICE Transactions in Communications High Performance Backbone Network Technology examines critical breakthroughs in the design and provision of effective public service networks in areas including traffic control telephone service real time video transfer voice and image transmission for a content delivery network CDN and Internet access The contributors explore system structures experimental prototypes and field trials that herald the development of new IP networks that offer quality of service QoS as well as enhanced security reliability and function Offers many hints and guidelines for future research in IP and photonic backbone network technologies Multimedia Systems, Standards, and Networks Atul Puri, 2000-03-22 Describes ITU H H 323 and H 324 H 263 ITU T video and MPEG 4 standards systems and coding IP and ATM networks multimedia search and retrieval image retrieval in digital laboratories and the status and direction of MPEG 7 **Queuing Theory and Telecommunications** Giovanni Giambene, 2021-10-29 This thoroughly revised textbook provides a description of current networking technologies and protocols as well as important new tools for network performance analysis based on queuing theory The third edition adds topics such as network virtualization and new related architectures novel satellite systems such as Space X OneWeb jitter and its impact on streaming services packet level FEC techniques and network coding new Markovian models and advanced details on M G 1 queuing models The author also adds new selected exercises throughout the chapters and a new version of the slides and the solution manual The book maintains its organization with networking technologies and protocols in Part I and then theory and exercises with applications to the different technologies and protocols in Part II This book is intended as a textbook for master level courses in networking and telecommunications sectors *OSS for Telecom Networks* Kundan Misra, 2012-12-06 Places OSS software in the context of telecommunications as a business Gives a concrete understanding of what OSS is what it does and how it does it avoiding deep technical details Frequently relates OSS software to business drivers of telecom service providers *High-Performance Networks for Multimedia Applications* Andre Danthine, Otto Spaniol, Wolfgang Effelsberg, Domenico Ferrari, 2012-12-06 High Performance Networks for Multimedia Applications presents the latest research on the services and protocols for networks providing the communication support for distributed multimedia applications The need for end to end QoS for these multimedia applications is raising the stakes for a powerful shaping and scheduling in the network adapter It is also creating a need for new services at the ATM layer CBR and VBR being augmented by UBR ABR and GFR which have to be evaluated in the TCP IP environment of today and tomorrow With the pressure of all the new technologies available today the backbone architecture needs to be revisited and the success of the TCP IP must not eliminate the possibility of adding a native ATM access to it Most of the research in communication services such as IntServ DiffServ and Native ATM is driven by the

requirements of multimedia systems and this book illustrates the new emphasis by bringing telecommunication and computer communication experts together with application designers This is particularly true for the security issues also addressed here Last but not least modeling techniques and mathematical models are essential to assess the performance of the networks to be built and to evaluate next century scenarios unachievable by a simple scaling of today's solutions High Performance Networks for Multimedia Applications is a collection of high quality research papers and the in depth treatment of the subjects provides interesting and innovative solutions It is an essential reference for telecommunication and computer experts and QoS based application designers It is also a comprehensive text for graduate students in high performance networks and multimedia applications
