Quality Control Manual For Citrus Proces:

Quality Control Manual for Citrus Processing Plants James Beverly Redd, Donald Lee Hendrix, Charles Marion Hendrix, 1992 **Handbook of Food Process Modeling and Statistical Quality Control** Mustafa Ozilgen, 1998-09-16

Fundamental techniques of mathematical modeling of processes essential to the food industry are explained in this text. Instead of concentrating on detailed theoretical analysis and mathematical derivations, important mathematical prerequisites are presented in summary tables. Readers' attention is focused on understanding modeling techniques rather than the finer mathematical points. Topics covered include modeling of transport phenomena, kinetic processes, and food engineering operations. Statistical process analysis and quality control as applied to the food industry are also discussed. The book's main feature is the large number of worked examples presented throughout. Included are examples from almost every conceivable food process, most of which are based on real data given in the many references. Each example is followed by a clear step-by-step worked solution.

Philip R. Ashurst,2013-11-09 In the period of about five years since the first edition of this book appeared many changes have occurred in the fruit juice and beverage markets The growth of markets has continued blunted to some extent no doubt by the recession that has featured prominently in the economies of the major consuming nations But perhaps the most significant area that has affected juices in particular is the issue of authenticity Commercial scandals of substantial proportions have been seen on both sides of the Atlantic because of fraudulent practice Major strides have been made in the development of techniques to detect and measure adulterants in the major juices A contribution to Chapter 1 describes one of the more important scientific techniques to have been developed as a routine test method to detect the addition of carbohydrates to juices Another and perhaps more welcome development in non carbonated beverages during the past few years is the rapid growth of sports drinks Beverages based on glucose syrup have been popular for many years and in some parts of the world isotonic products have long featured in the sports arena A combination of benefits is now available from a wide range of preparations formulated and marketed as sports drinks and featuring widely in beverage markets world wide A new chapter reviews their formulation and performance characteristics Another major trend in the area of fruit containing non carbonated beverages is the highly successful marketing of ready to drink products Agriculture Handbook ,1956
