Quantitative Biology Of The Pig:

A Quantitative Biology of the Pig Københavns Universitet. Biovidenskabelige Fakultet for Fødevarer, Veterinærmedicin og Naturressourcer. Institut for Basal Husdyr- og Veterinærvidenskab, 2008 Mechanistic Modelling in Pig and Poultry Production R. Gous, C. Fisher, Trevor Raymond Morris, 2006-01-01 These proceedings contain 15 papers on the recent advances in pig and poultry mechanistic modelling Notable among the papers is the consideration of new components of the animal production process such as social stressors and disease Understanding of some new systems such as the physiological control of egg production in hens by modelling is the given focus in one paper. The topics covered in the other papers include the following introduction to modelling in the animal sciences different approaches to modelling animal systems basic concepts describing animal growth and feed intake modelling populations for purposes of optimization advancements in empirical models for prediction and prescription nutrient flow models energy transactions and energy feed systems evaluation of animal genotypes through model inversion considerations for representing microenvironmental conditions in simulation models for broiler chickens use of physiological models to define environmental control strategies comparison of pig growth models from the genetic point of view model of metabolism in the sow and place of models in the new technologies of production systems Mathematical Modelling in Animal Nutrition J. France, E. Kebreab, 2008-01-01 Mathematical modelling is increasingly applicable to the practical sciences Here mathematical approaches are applied to the study of mechanisms of digestion and metabolism in primary animal species It also explores common themes between species and provides an integrated approach to mathematical modelling in animal nutrition Poultry and pig nutrition Wouter H. Hendriks, Martin W.A. Verstegen, László Babinszky, 2023-08-07 Poultry and pig nutrition challenges of the 21st century focuses on the important challenges animal production faces in the light of increasing global feed scarcity climate change and improvements in animal welfare Animal nutrition plays a critical role in providing answers to these 21st century challenges Internationally leading authorities in nutrition and nutrition related disciplines provide their views and solutions New research areas are discussed and the current gaps in our knowledge are identified Among the topics discussed are the use of microbes for natural solutions the importance of individual feed intake determination technological treatments of feed ingredients and advances in modelling In addition authors provide their insights on the effects of environment housing on animal functioning and the impact of climate change on the mycotoxin content of feed ingredients as well as the importance of pro and antioxidant balance in animals The increasing global demand for feed will increase the search for alternative feed ingredients especially new protein sources while for an environmentally sustainable human diet life cycle assessment needs to be combined with other modelling techniques that address environmental impacts of dietary choices at the international level Future challenges require new solutions and innovations and this book contains a collection of ideas for our 21st century challenges Nutrient Requirements of Swine National Research Council, Division on Earth and Life

Studies, Board on Agriculture and Natural Resources, Committee on Nutrient Requirements of Swine, 2012-08-02 Since 1944 the National Research Council has published 10 editions of the Nutrient Requirements of Swine This reference has guided nutritionists and other professionals in academia and the swine and feed industries in developing and implementing nutritional and feeding programs for swine The swine industry has undergone considerable changes since the tenth edition was published in 1998 and some of the requirements and recommendations set forth at that time are no longer relevant or appropriate The eleventh revised edition of the Nutrient Requirements of Swine builds on the previous editions published by the National Research Council A great deal of new research has been published during the last 15 years and there is a large amount of new information for many nutrients In addition to a thorough and current evaluation of the literature on the energy and nutrient requirements of swine in all stages of life this volume includes information about feed ingredients from the biofuels industry and other new ingredients requirements for digestible phosphorus and concentrations of it in feed ingredients a review of the effects of feed additives and feed processing and strategies to increase nutrient retention and thus reduce fecal and urinary excretions that could contribute to environmental pollution The tables of feed ingredient composition are significantly updated Nutrient Requirements of Swine represents a comprehensive review of the most recent information available on swine nutrition and ingredient composition that will allow efficient profitable and environmentally The Weaner Pig M. Strategies for Mitigating the Environmental Impacts of Pig and Poultry Production Ines Andretta, Luciano Hauschild, Marcos Kipper, Aline Remus, Florence Garcia-Launay, 2022-09-28 Animal Models J.B. Owen, J.L. Treasure, D.A. Collier, 2013-03-14 The book aims to review knowledge on the disorders of eating behaviour and body composition in some of the non primate higher animals and to relate these to similar conditions in humans With advances in understanding the nature of these disorders and their biological basis it seems timely to assess what cross species comparisons can tell us about the general underlying factors at work This may also help to delineate what may be a general biological basis that humans share with their higher animal comrade species and what may distinguish human from non human particularly in a cultural context This could help in combating better the problems of these conditions in the animal species as well as in man and in suggesting well based preventive measures As far as people are concerned the last two decades of the 20th century have shown a significant increase in obesity in the richer countries particularly the USA Table 1 Possibly associated with the obesity boom there is an increasing awareness of other disorders of eating behaviour and body composition These range from anorexia nervosa at the other end of body composition to obesity to others such as bulimia with more variable effects on body composition
