## **Quantitative Methods In Neuroscience:**

**Quantitative Methods in Neuroscience** Stephen M. Evans, Ann Marie Janson, Jens Randel Nyengaard, 2004 Stereology is a valuable tool for neuroscientists allowing them to obtain 3 Dimensional information from 2 Dimensional measurements made on appropriately sampled sections usually obtained from histological sections or MRI CT PET scans This 3 D information is invaluable in correlating structural functional relationships in the pursuit of far greater understanding of the function of the central nervous system However in carrying out such measurements often based on limited data sets there is a risk of experimenter bias An important feature of modern design based stereology is to be aware of potential sources of bias and eliminate them during the data collection With many of the major neuroscience journals now insisting that quantitative data be presented there is a greater need than ever for neuroscientists to understand the theory and practice behind quantitative methods such as those offered by stereology **Quantitative Methods in Neuroscience** is a cookbook of stereological methods written especially for neuroscientists It provides clear and accessible advice about when and when not to use stereology Throughout the book the emphasis is on practical guidance rather than discussions and formulae Written by leading scientists in the field of stereology with a Foreword by D C Sterio the book will be a valuable introduction to these methods for neuroscientists and all those involved in development of new drug programmes
