Quantum Structures And The Nature Of Reality:

Quantum Structures and the Nature of Reality Diederik Aerts, Jaroslaw Pykacz, 2013-04-17 Quantum Structures and the Nature of Reality is a collection of papers written for an interdisciplinary audience about the quantum structure research within the International Quantum Structures Association The advent of quantum mechanics has changed our scientific worldview in a fundamental way Many popular and semi popular books have been published about the paradoxical aspects of quantum mechanics Usually however these reflections find their origin in the standard views on quantum mechanics most of all the wave particle duality picture Contrary to relativity theory where the meaning of its revolutionary ideas was linked from the start with deep structural changes in the geometrical nature of our world the deep structural changes about the nature of our reality that are indicated by quantum mechanics cannot be traced within the standard formulation The study of the structure of quantum theory its logical content its axiomatic foundation has been motivated primarily by the search for their structural changes Due to the high mathematical sophistication of this quantum structure research no books have been published which try to explain the recent results for an interdisciplinary audience This book tries to fill this gap by collecting contributions from some of the main researchers in the field They reveal the steps that have been taken towards a deeper structural understanding of quantum theory

The Nature of Reality Steven E. Kaufman, 2023-10-03 What is The Nature of Reality Contrary to what almost all human beings presently believe we do not live in a physical Universe because as The Nature of Reality explains physical reality is just an appearance that is being created by our minds and then superimposed by projection upon the non physical reality that is both actually there and what we really are The problem that arises as a result of believing physical reality to be the reality that is actually there is that that mistaken belief causes physical reality to function like a misperceived reflection to continuously obscure one's own reality from their awareness thereby effectively trapping one's awareness in what is nothing more than a mind generated experiential dream that is neither the reality that is actually there nor the reality that one really is The Nature of Reality was written to provide you with the opportunity to free yourself from that experiential dream and from the suffering being trapped in that dream produces by using fundamental scientific facts to demonstrate that physical reality is not the reality that is actually there where it appears to be so you can rid your mind of the false belief in physical reality that it is inadvertently using to convert physical reality into a delusion that continuously hides from your awareness the non physical reality you really are Whether you know it or not your awareness is presently trapping itself in a mind generated experiential dream as a function of what is nothing more than a mistaken belief The question is Are you ready to loosen your grip on that belief so you can begin to wake up and become aware of the reality you really are

The Nature of Consciousness, the Structure of Reality Jerry Davidson Wheatley, 2001 This book describes how understanding the structure of reality leads to the Theory of Everything Equation The equation unifies the forces of nature and enables the merging of relativity with quantum theory The book explains the big bang theory and everything else

Einstein, Tagore and the Nature of Reality Partha Ghose, 2016-06-23 The nature of reality has been a long debated issue among scientists and philosophers In 1930 Rabindranath Tagore and Albert Einstein had a long conversation on the nature of reality This conversation has been widely quoted and discussed by scientists philosophers and scholars from the literary world The important question that Tagore and Einstein discussed was whether the world is a unity dependent on humanity or the world is a reality independent on the human factor Einstein took the stand adopted by Western philosophers and mathematicians namely that reality is something independent of the mind and the human factor Tagore on the other hand adopted the opposite view Nevertheless both Einstein and Tagore claimed to be realists despite the fundamental differences between their conceptions of reality Where does the difference lie Can it be harmonized at some deeper level Can Wittgenstein for example be a bridge between the two views This collection of essays explores these two fundamentally different conceptions of the nature of reality from the perspectives of theories of space time quantum theory general philosophy of science cognitive science and mathematics

Reality Peter Twight, 2017-06-22 America is in a multi cultural crisis We are straying from our God given roots We have seen the consequences building for eight years In horror the rural roots and working class America recoiled and as a consequence God gave us a working class billionaire and here we are What shall we do We need to return to the strong times of Americas beginning Our evolutionary roots are fundamentally religious We want a religion of the heart a religion where the Spirit of God walks with us and he talks with us and he tells us we were not alone because he lives in and with us What might that be like to walk with the Spirit with nature and natures God Today this is the new old theology of science and the reality that we all have believed in the hidden God reality in whom we live and move and have our being You can follow science all the way into the reality that we know only partially from our traditions and need to know again in our hearts This book does what no other book does it begins with the science of evolution of the universe life humans and brains including some information about our quantum brain that supports quantum connections to the universe and the dimension of spirit It then gives a brief up to date summary of modern biblical knowledge providing an originalist theological interpretation It sets the stage for science with a brief history of how Christianity developed how it then was undermined by its child the now dominating science that has newly reached studies of consciousness the edge of theology This study is a brief unorthodox rethinking of the importance of religion in modern society comparing theological translations of biblical history with a laymans summary of the theological significance of modern scientific knowledge in biology quantum physics and cosmology and pleads for a reconstruction of Christian doctrines and a re birth of spirituality in everyday life as a cure for our modern chaos

How Humans Recognize Objects: Segmentation, Categorization and Individual Identification Chris Fields, 2016-08-18 Human beings experience a world of objects bounded entities that occupy space and persist through time Our actions are directed toward objects and our language describes objects We categorize objects into kinds that have different typical properties and behaviors We regard some kinds of objects each other for example as animate agents capable of independent experience and action while we regard other kinds of objects as inert We re identify objects immediately and without conscious deliberation after days or even years of non observation and often following changes in the features locations or contexts of the objects being re identified Comparative developmental and adult observations using a variety of approaches and methods have yielded a detailed understanding of object detection and recognition by the visual system and an advancing understanding of haptic and auditory information processing Many fundamental questions however remain unanswered What for example physically constitutes an object How

do specific classically characterizable object boundaries emerge from the physical dynamics described by quantum theory and can this emergence process be described independently of any assumptions regarding the perceptual capabilities of observers How are visual motion and feature information combined to create object information How are the object trajectories that indicate persistence to human observers implemented and how are these trajectory representations bound to feature representations How for example are point light walkers recognized as single objects How are conflicts between trajectory driven and feature driven identifications of objects resolved for example in multiple object tracking situations Are there separate what and where processing streams for haptic and auditory perception Are there haptic and or auditory equivalents of the visual object file Are there equivalents of the visual object token How are object identification conflicts between different perceptual systems resolved Is the common assumption that persistent object is a fundamental innate category justified How does the ability to identify and categorize objects relate to the ability to name and describe them using language How are features that an individual object had in the past but does not have currently represented How are categorical constraints on how objects move or act represented and how do such constraints influence categorization and the re identification of individuals How do human beings re identify objects including each other as persistent individuals across changes in location context and features even after gaps in observation lasting months or years How do human capabilities for object categorization and re identification over time relate to those of other species and how do human infants develop these capabilities What can modeling approaches such as cognitive robotics tell us about the answers to these questions Primary research reports reviews and hypothesis and theory papers addressing questions relevant to the understanding of perceptual object segmentation categorization and individual identification at any scale and from any experimental or modeling perspective are solicited for this Research Topic Papers that review particular sets of issues from multiple disciplinary perspectives or that advance integrative hypotheses or models that take data from multiple experimental approaches into account are especially encouraged

Science, God and the Nature of Reality Sarah S. Knox, 2010 This philosophy of science book is written by a biomedical scientist for a lay audience but is well referenced for use by scientific readers and college course curricula Its thesis is that the current paradigm in the biological and medical sciences which is responsible for rejecting the existence of a Divine Being is outdated There is no factual basis for creating a dichotomy between evolution and Divine Design Misconceptions about the nature of reality i e the belief that matter is the ultimate cause of everything we think feel say and do have made it easy to ignore data demonstrating an important biological role for the energetic aspects of matter and to leave the question of the existence of a Divine being to the purview of philosophy and religion The author uses extensive scientific data to highlight the inconsistencies in current theories and relates her personal journey in trying to explain her observations with purely mechanistic theories Her ultimate conclusion is that the existence or non existence of God can no longer be ignored by scientists It is one of the most important scientific questions there is and

like many other issues that were formally relegated to the domain of philosophy can and should be investigated by modern science **Metadebates on Science** Gustaaf C. Cornelis, Sonja Smets, Jean-Paul van Bendegem, 2013-11-11 How do scientists approach science Scientists sociologists and philosophers were asked to write on this intriguing problem and to display their results at the International Congress Einstein Meets Magritte The outcome of their effort can be found in this rather unique book presenting all kinds of different views on science Quantum mechanics is a discipline which deserves and receives special attention in this book mainly because it is fascinating and hence appeals to the general public This book not only contains articles on the introductory level it also provides new insights and bold even provocative proposals That way the reader gets acquainted with science in the making sitting in the front row The contributions have been written for a broad interdisciplinary audience of scholars and students
