Morality by Degrees Alastair Norcross, 2020-03-25 In *Morality by Degrees* Alastair Norcross articulates and defends a radical new approach to ethical theory. Consequentialist theories of the right connect the rightness and wrongness and related notions of actions with the intrinsic goodness and badness of states of affairs consequential on those actions. The most popular such theory is maximization, which is said to demand of agents that they maximize the good that they do the best they can at all times. Thus it may seem that consequentialist theories are overly demanding and relatedly that they cannot accommodate the phenomenon of going above and beyond the demands of duty. However, a clear understanding of consequentialism leaves no room for a theory of the right at least not at the fundamental level of the theory. A consequentialist theory such as utilitarianism is a theory of how to rank outcomes and derivatively actions which provides reasons for choosing some actions over others. It is thus a purely scalar theory with no demands that certain actions be performed and no fundamental classification of actions as right or wrong. However, such notions may have pragmatic benefits at the level of application since many people find it easier to guide their conduct by simple commands rather than to think in terms of reasons of varying strength to do one thing rather than another. A contextualist semantics for various terms such as right, permissible, harm when combined with the scalar approach to consequentialism allows for the expression of truth apt propositions with sentences containing such terms.

Aesthetics and the Sciences of Mind Greg Currie, Matthew Kieran, Aaron Meskin, Jon Robson, 2014-07-24 Through much of the twentieth century philosophical thinking about works of art, design and other aesthetic products has emphasized intuitive and reflective methods often tied to the idea that philosophy's business is primarily to analyze concepts. This philosophy from the armchair approach contrasts with methods used by psychologists, sociologists, evolutionary thinkers and others who study the making and reception of the arts empirically. How far should philosophers be sensitive to the results of these studies? Is their own largely a priori method basically flawed? Are their views on aesthetic value, interpretation, imagination and the emotions of art to be rethought in the light of best science? The essays in this volume seek answers to these questions, many through detailed studies of problems traditionally regarded as philosophical but where empirical inquiry seems to be shedding interesting light. No common view is looked for or found in this volume; a number of authors argue that the current enthusiasm for scientific approaches to aesthetics is based on a misunderstanding of the philosophical enterprise and sometimes on misinterpretation of the science; others suggest various ways that philosophy can and should accommodate and sometimes yield to the empirical approach. The editors provide a substantial introduction which sets the scene historically and conceptually before summarizing the claims and arguments of the essays.

The Power of Legitimacy among Nations Thomas M. Franck, 1990-07-26 Although there is no international government and no global police agency enforces the rules, nations obey international law. In this provocative study, Franck employs a broad range of historical, legal, sociological, anthropological, political and philosophical modes of analysis to unravel

the mystery of what makes states and people perceive rules as legitimate Demonstrating that virtually all nations obey most rules nearly all of the time Franck reveals that the more legitimate laws and institutions appear to be the greater is their capacity for compliance Distilling those factors which increase the perception of legitimacy he shows how a community of rules can be fashioned from a system of sovereign states without creating a global leviathan **Dr. Seuss and Philosophy** Jacob M. The Normative Status of Time Bias Kristie Miller, 2024-12-10 This book empirically investigates the nature of time biases Many philosophers think that it is rationally permissible to prefer a life that is overall worse to one that is overall better as long as the badness of that

life lies in the past rather than the future These philosophers think that it is rationally permissible to be time biased Time biased individuals differently value the wellbeing of their various selves in virtue of where those selves are located in time This book focuses on three key kinds of time bias near present and future bias It presents a rich picture of the conditions under which we display these biases and it outlines several psychological explanations for them It then uses this new empirical research we conducted to inform arguments regarding the normative status of these biases At its heart it considers the question does having time biased preferences of one sort or another make us better off or worse off And it uses the answers to these questions to inform our theorising about whether we have reason either to have or to avoid having such preferences
