

MIS CASE STUDY

a. In the light of the system, describe the decisions to be made in the area of strategic planning, managerial control and operational control? What information would you require to make such decisions?

Ans:- 1. A management information system (MIS) is an organized combination of people, hardware, communication networks and data sources that collects, transforms and distributes information in an organization. An MIS helps decision making by providing timely, relevant and accurate information to managers. The physical components of an MIS include hardware, software, database, personnel and procedures.

Management information is an important input for efficient performance of various managerial functions at different organization levels. The information system facilitates decision making. Management functions include planning, controlling and decision making. Decision making is the core of management and aims at selecting the best alternative to achieve an objective. The decisions may be strategic, tactical or technical. Strategic decisions are characterized by uncertainty. They are future oriented and relate directly to planning activity. Tactical decisions cover both planning and controlling. Technical decisions pertain to implementation of specific tasks through appropriate technology. Sales region analysis, cost analysis, annual budgeting, and relocation analysis are examples of decision-support systems and management information systems.

There are 3 areas in the organization. They are strategic, managerial and operational control.

Strategic decisions are characterized by uncertainty. The decisions to be made in the area of strategic planning are future oriented and relate directly to planning activity. Here basically planning for future that is budgets, target markets, policies, objectives etc. is done. This is basically a top level where up-to-the minute information on the food items ordered and breaks

Qualitative Research in Information Systems Michael D Myers, David Avison, 2002-05-10 Qualitative research has become a legitimate approach within the information systems community, but researchers have traditionally drawn upon material from the social sciences, given the absence of a single source relevant to them. *Qualitative Research in Information Systems: A Reader* represents just such a volume and is both timely and relevant. Information systems and qualitative research articles are now widely used for teaching on many upper level courses in information systems, and there is demand for a definitive collection of these readings as a basic reader and teaching text. This book expertly brings together the seminal works in the field, along with editorial introductions to assist the reader in understanding the essential principles of qualitative research. The book is organized according to the following thematic sections: Part I Overview of Qualitative Research; Part II Philosophical Perspectives; Part III Qualitative Research Methods; Part IV Modes of Analyzing and Interpreting Qualitative Data. *Qualitative Research in Information Systems: A Reader* should become the benchmark reference point for students and researchers in information systems, management science, and others involved in information technology needing to learn about qualitative research.
