James E. Duffy, Florence A. Cloghessy, 1987-06-01 Automotive Computer Network Repair Mandy Concepcion, Automotive Computer Network Repair Diagnostic Strategies of Modern Automotive Systems By Mandy Concepcion In this book we will cover the intricacies of automotive inter module communication systems or networks The scope of this section will also go beyond the normal needs of an automotive technician Hence this will probably be the most difficult part of this series to comprehend Be patient and open minded Always give yourself time to absorb the knowledge and do not be discouraged Special emphasis will be placed on the CAN system Controller Area Network since it is now the standard CAN is one of the 9 OBD 2 protocols A protocol is an agreement on communications interchange It is in essence a computer communication language and specifies signaling wiring size of cables used who controls the network and voltage levels Various protocols were used in the past some proprietary and some generic such as ISO 9141 and SAE 1850 VPW but the standard is now the CAN protocol Virtually all vehicle networks now talk to each other through the CAN protocol It is now common place to see the seat belt SRS Airbag transmission ABS Brakes engine and radio modules or computer talking to each other through the network Ever wondered why your radio volume goes up when you accelerate the vehicle That s the engine computer or module telling the radio to raise the volume due to a higher RPM and hence higher ambient noise It is also common to see a non shifting transmission due to a faulty network and the issue not being related to the transmission at all Hopefully this book will shed some light on the operation and knowledge needed to tackle automotive networks in today s vehicles Enjoy
