Multi-slice CT in Cardiac Imaging Bernd M. Ohnesorge, Thomas G. Flohr, Christoph R. Becker, Maximilian F. Reiser, 2013-03-09 Cardiac diseases and in particular coronary artery disease are the leading cause of death and morbidity in the industrialized countries. The development of reliable cardiac imaging techniques is considered a key issue in improving patient care. This book presents and discusses the technical concepts, the potential spectrum of applications and the future perspectives of multi slice CT in cardiac imaging. The discussion is based on the experience of internationally leading clinical institutions. It shows that this new modality has the potential to become an important and robust tool for non invasive and early diagnosis of cardiac diseases. *Multi-slice and Dual-source CT in Cardiac Imaging* Bernd M. Ohnesorge, Thomas G. Flohr, Christoph R. Becker, Andreas Knez, Maximilian F. Reiser, 2006-12-15 Preface to the Second Edition Despite worldwide efforts to assess and control cardiovascular risk factors cardiac diseases and in particular coronary artery disease CAD are still the foremost causes of death in the developed countries of Western Europe, North America and Asia and are becoming increasingly common in Eastern Europe and the developing world. Deanfield 2001 Approximately one in five deaths is currently related to cardiac disease in Europe and the US. Nearly 500 000 deaths caused by CAD are reported every year in the US over 600 000 in Europe 170 000 of these in Germany alone. Over 12 million US citizens have a history of CAD while every year 1.1 million US and 300 000 German citizens suffer a coronary attack and more than 40% will die as a result of these attacks. Every second patient dies without prior symptoms and in most cases myocardial infarction occurs without warning. Once a blockage of the coronary arteries has occurred death may ensue within a few minutes even before hospitalization is possible. These alarming statistics highlight an acute need for tools to diagnose cardiac and coronary artery disease. Presently the gold standard modality for diagnosis of CAD is invasive selective coronary angiography. More than 2

Multislice CT Claus D. Claussen, E.K. Fishman, B. Marincek, M. Reiser, 2012-12-06 The 6th International SOMATOM CT Scientific User Conference was held in Tiibingen on September 27 and 28 2002 under the auspices of the Eberhard Karls University Tiibingen, the University Hospital Zurich, the Ludwig Maximilians University Munich and the Johns Hopkins University Baltimore. Siemens AG Medical Solutions Forchheim was again very gracious in sponsoring the course and the associated events. There have been remarkable achievements in CT technology, workflow management and applications since the last SOMATOM user conference in Zurich in June 2000. The next generation of multidetector row CT, now capable of acquiring 16 slices during a single rotation, has been introduced. The meeting in Tiibingen was the very first conference where research groups from all over the world were presenting their very first results with this new technology in the various fields of CT imaging. It became obvious that these new technical possibilities will again have significant impact on the clinical use of CT. Tiibingen offered a special and inspiring atmosphere for the meeting, an atmosphere which has been preserved throughout time. For more than 500 years the university, one of the oldest in Germany, has been a source for new ideas being

pursued by famous philosophers poets and scientists such as Hölderlin Morike Hegel Schelling Kepler Butenandt and many more
