Maths Investigations Susan Levy, 2021-03-01 The activities in Maths Investigations have been structured to provide materials that are appropriate to the needs and abilities of a range of abilities in the mathematics class At this stage of their mathematics education students should be required to investigate concepts in considerable depth Accordingly some activities in this book stretch over several pages perhaps requiring students to carry an idea over from day to day as they move through a particular unit This idea of mathematical investigations is intended to provide challenge for students to encourage them to look at the real life aspects of mathematics and to stimulate them to go to even further depths than the text provides for *Handbook of the History and Philosophy of Mathematical Practice* Bharath Sriraman, 2024-04-26 The purpose of this unique handbook is to examine the transformation of the philosophy of mathematics from its origins in the history of mathematical practice to the present It aims to synthesize what is known and what has unfolded so far as well as to explore directions in which the study of the philosophy of mathematics as evident in increasingly diverse mathematical practices is headed Each section offers insights into the origins debates methodologies and newer perspectives that characterize the discipline today Contributions are written by scholars from mathematics history and philosophy as well as other disciplines that have contributed to the richness of perspectives abundant in the study of philosophy today who describe various mathematical practices throughout different time periods and contrast them with the development of philosophy Editorial Advisory Board Andrew Aberdein Florida Institute of Technology USA Jody Azzouni Tufts University USA Ot vio Bueno University of Miami USA William Byers Concordia University Canada Carlo Cellucci Sapienza University of Rome Italy Chandler Davis University of Toronto Canada 1926 2022 Paul Ernest University of Exeter UK Michele Friend George Washington University USA Reuben Hersch University of New Mexico USA 1927 2020 Kyeong Hwa Lee Seoul National University South Korea Yuri Manin Max Planck Institute for Mathematics Germany 1937 2023 Athanase Papadopoulos University of Strasbourg France Ulf Persson Chalmers University of Technology Sweden John Stillwell University of San

Francisco USA David Tall University of Warwick UK 1941 2024 This book with its exciting depth and breadth illuminates us about the history practice and the very language of our subject about the role of abstraction of proof and manners of proof about the interplay of fundamental intuitions about algebraic thought in contrast to geometric thought The richness of mathematics and the philosophy encompassing it is splendidly exhibited over the wide range of time these volumes cover from deep platonic and neoplatonic influences to the most current experimental approaches Enriched as well with vivid biographies and brilliant personal essays written by and about people who play an important role in our tradition this extraordinary collection of essays is fittingly dedicated to the memory of Chandler Davis Reuben Hersh and Yuri Manin Barry Mazur Gerhard Gade University Professor Harvard University This encyclopedic Handbook will be a treat for all those interested in the history and philosophy of mathematics Whether one is interested in individuals from Pythagoras through Newton and Leibniz to Grothendieck fields geometry algebra number theory logic probability analysis viewpoints from Platonism to Intuitionism or methods proof experiment computer assistance the reader will find a multitude of chapters that inform and fascinate John Stillwell Emeritus Professor of Mathematics University of San Francisco Recipient of the 2005 Chauvenet Prize Dedicating a volume to the memory of three mathematicians Chandler Davis Reuben Hersh and Yuri Manin who went out of their way to show to a broader audience that mathematics is more than what they might think is an excellent initiative Gathering authors coming from many different backgrounds but who are very strict about the essays they write was successfully achieved by the editor in chief The result a great source of potential inspiration Jean Pierre Bourguignon Nicolaas Kuiper Honorary Professor at the Institut des Hautes études Scientifiques *Modern Mathematics* Dirk De Bock, 2023-03-08 The international New Math developments between about 1950 through 1980 are regarded by many mathematics educators and education historians as the most historically important development in curricula of the twentieth century It attracted the attention of local and international politicians of teachers and of parents and influenced the teaching and learning of mathematics at all levels kindergarten to college graduate in many nations After garnering much initial support it began to attract criticism But as Bill Jacob and the late Jerry Becker show in Chapter 17 some of the effects became entrenched This volume edited by Professor Dirk De Bock of Belgium provides an outstanding overview of the New Math modern mathematics movement Chapter authors provide exceptionally high quality analyses of the rise of the movement and of subsequent developments within a range of nations The first few chapters show how the initial leadership came from mathematicians in European nations and in the United States of America The background leaders in Europe were Caleb Gattegno and members of a mysterious group of mainly French pure mathematicians who since the 1930s had published under the name of a fictitious Nicolas Bourbaki In the United States there emerged during the 1950s various attempts to improve U S mathematics curricula and teaching especially in secondary schools and colleges This side of the story climaxed in 1957 when the Soviet Union succeeded in launching Sputnik the first satellite Undoubtedly this is a

landmark publication in education The foreword was written by Professor Bob Moon one of a few other scholars to have written on the New Math from an international perspective The final epilogue chapter by Professor Geert Vanpaemel a historian draws together the overall thrust of the volume and makes links with the general history of curriculum development especially in science education including recent globalization trends

Seventeenth Century Practical Mathematics Paul Hughes, 2021-09-28 This exciting Greenville Collins biography is about seventeenth century navigation focusing for the first time on mathematics practised at sea This monograph argues the Restoration kings Charles II and James II promotion of cartography for both strategy and trade It is aimed at the academic cartographic and larger market of marine enthusiasts Through shipwreck and Arctic marooning and Dutch and Spanish charts Collins evolved a Prime Meridian running through Charles s capital After John Ogilby s successful Britannia Charles set Collins surveying his kingdom s coasts and James set John Adair surveying in Scotland They triangulated at sea Subsequently Collins persuaded James to sustain his dead brother s ambition This the British coast s first survey took six years After James s flight and William III s invasion Collins lead the royal yacht squadron for six years more garnering funds to publish Great Britain s Coasting Pilot The Admiralty and civic institutions subsidised what became his own pilot Collins aided Royal Society members in their investigations and his new guide remained vital to navigators through the century following Charles s cartographic promotion bloomed the most spectacularly in the atlases of Ogilby Collins and John Flamsteed for roads harbours and stars

e-Learning Excellence Awards 2015: An Anthology of Case Histories Dan Remenyi, 2015-10-13 The call for case histories was announced in 2014 and 60 submissions were received describing on an outline basis what was achieved with these applications of e Learning There were 36 interesting examples described in these abstracts which were invited to forward a completed case history The panel of experts then chose 12 case history finalists who were invited to present their work at the 14th annual European Conference on e Learning at the University of Hertfordshire at Hatfield in the UK in October 2015 As can be seen from the Contents page the topics presented range widely as was expected when working with a subject like e Learning It may also be observed that the entrants come from many different parts of the world The competition requires the 3 best to be chosen and it is clear that the judges will have a challenging task to select the winners

The Mathematics of the Heavens and the Earth Glen Van Brummelen, 2009 The Mathematics of the Heavens and the Earth is the first major history in English of the origins and early development of trigonometry Glen Van Brummelen identifies the earliest known trigonometric precursors in ancient Egypt Babylon and Greece and he examines the revolutionary discoveries of Hipparchus the Greek astronomer believed to have been the first to make systematic use of trigonometry in the second century BC while studying the motions of the stars The book traces trigonometry's development into a full fledged mathematical discipline in India and Islam explores its applications to such areas as geography and seafaring navigation in the European Middle Ages and Renaissance and shows how trigonometry retained its ancient roots at

the same time that it became an important part of the foundation of modern mathematics The Mathematics of the Heavens and the Earth looks at the controversies as well including disputes over whether Hipparchus was indeed the father of trigonometry whether Indian trigonometry is original or derived from the Greeks and the extent to which Western science is indebted to Islamic trigonometry and astronomy The book also features extended excerpts of translations of original texts and detailed yet accessible explanations of the mathematics in them No other book on trigonometry offers the historical breadth analytical depth and coverage of non Western mathematics that readers will find in The Mathematics of the Heavens and the Earth

The Richness of the History of Mathematics Karine Chemla, José Ferreirós, Lizhen Ji, Erhard Scholz, Chang Wang, 2023-11-27 This book a tribute to historian of mathematics Jeremy Gray offers an overview of the history of mathematics and its inseparable connection to philosophy and other disciplines Many different approaches to the study of the history of mathematics have been developed Understanding this diversity is central to learning about these fields but very few books deal with their richness and concrete suggestions for the what why and how of these domains of inquiry The editors and authors approach the basic question of what the history of mathematics is by means of concrete examples For the how question basic methodological issues are addressed from the different perspectives of mathematicians and historians Containing essays by leading scholars this book provides a multitude of perspectives on mathematics its role in culture and development and connections with other sciences making it an important resource for students and academics in the history and philosophy of mathematics
