This multivolume book is a critical reference source for engineers, computer scientists, transportation authorities, students, and practitioners in the field of transportation systems management. Tools and Applications of Biochemical Engineering Science K. Schügerl, A.-P. Zeng, 2003-07-01

This special volume *Tools and Applications of Biochemical Engineering Science* is dedicated to Professor Wolf Dieter Deckwer on the occasion of his 60th birthday. It was a great pleasure for me to act together with Professor Karl Schügerl as volume editor and to present here a collection of 11 outstanding review articles written mainly by former students, associates, colleagues, and friends of Wolf Dieter Deckwer. The title of this special volume well reflects the research interests and scientific pursuit of Wolf Dieter Deckwer during his more than 20 years work in the area of biochemical engineering, particularly during the last 15 years when he was the head of the Biochemical Engineering Division of GBF, German National Research Center for Biotechnology. He has decisively pushed the development not only of software tools ranging from analytical means and mathematical models for monitoring and understanding cellular processes to gene expression systems for designing microorganisms, but also of hardware tools such as computer control systems, bioreaction, and separation devices for effectively producing a variety of bioproducts on semi-production scale. New developments in some of these important tools in biochemical engineering are

reviewed in articles included in this volume Wolf Dieter Deckwer was among the leading biochemical engineers who timely pointed out the necessity of applying these tools in an integrated manner for bioprocess development By establishing Integrated Bioprocess Development as one of the GBF main search topics as early as 1990 he also actively promoted this idea

*Engineering Tools for Environmental Risk Management* Katalin Gruiz, Tamás Meggyes, Éva Fenyvesi, 2019-01-08 The four volumes of the book series *Engineering Tools for Environmental Risk Management* deal with environmental management assessment monitoring tools environmental toxicology and risk reduction technologies This last volume focuses on engineering solutions usually needed for industrial contaminated sites where nature's self remediation is inefficient or too slow The success of remediation depends on the selection of an increasing number of conventional and innovative methods This volume classifies the remedial technologies and describes the reactor approach to understand and manage in situ technologies similarly to reactor based technologies Technology types include physicochemical biological or ecological solutions where near natural sustainable remediation has priority A special chapter is devoted to natural attenuation where natural changes can help achieve clean up objectives Natural attenuation and biological and ecological remediation establish a serial range of technologies from monitoring only to fully controlled interventions using just the natural ecosystem or sophisticated artificial living systems Passive artificial ecosystems and biodegradation based remediation in addition to natural attenuation demonstrate the use of these green technologies and how engineering intervention should be kept at a minimum to limit damage to the environment and create a harmonious ecosystem Remediation of sites contaminated with organic substances is analyzed in detail including biological and physicochemical methods Comprehensive management of pollution by inorganic contaminants from the mining industry leaching and bioleaching and acid mine drainage is studied in general and specifically in the case of an abandoned mine in Hungary where the innovative technology of combined chemical and phytostabilization has been applied The series of technologies is completed by electrochemical remediation and nanotechnologies Monitoring verification and sustainability analysis of remediation provide a comprehensive overview of the management aspect of environmental risk reduction by remediation This book series focuses on the state of knowledge about the environment and its conscious and structured application in environmental engineering management and decision making
