About Prostate-Specific Antigen (PSA) Testing: Findings and Implications from Formative Testing of a Multimodal Intervention Cindy S. Soloe, Lauren A. McCormack, Katherine Treiman, David Driscoll, Shelly Harris, 2009-02-01 We created the You Decide multimodal intervention to provide men with the information skills and reinforcement needed to engage in informed decision making IDM related to prostate cancer screening We developed intervention materials based on three rounds of formative research conducted with 145 members of the intended recipient audience through 10 focus groups and more than 50 individual in depth interviews This report documents key findings from our formative research that may apply to the development of other IDM interventions especially those related to prostate cancer Our findings underscored 1 the difficulty of promoting IDM for cancer screening given people s high affinity for such screenings and 2 the challenge of graphically communicating risk related tradeoffs We found that pretest participants had a preference for full story narratives conveying personal experiences and interpersonal learning opportunities Our formative research findings also supported the need to use plain language to address a range of health literacy levels We describe our efforts to apply these formative research findings in our final intervention materials and discuss implications for future intervention research Our findings underscore the importance of involving the intended audience in the process of developing intervention materials **Aging**

research that improves and informs clinical practice Written by a team of research experts this book covers common practical problems such as applying theory to research and analysing data It also includes chapters on communicating with ethics committees recruiting samples from vulnerable populations audit as a research approach quasi experimental designs and using cognitive interviewing making it a new and innovative offering for health researchers Other topics covered in this book include Ethical considerations of research Designing and planning quantitative research projects Data measurement and collection Analyzing and presenting results With a strong practical focus each chapter features examples of real life research to illustrate the quantitative research process as well as tips and insights into research planning and execution This book is an essential guide for all health care professionals undertaking a postgraduate degree as well as health researchers and practitioners who need to carry out research as part of their professional role Contributors Ruth Belling Michelle Butler Catherine Comiskey Siobhan Corrigan Gloria Crispino Orla Dempsey Suzanne Guerin Maree Johnson Carmel Kelly Elaine Lehane Maria Lohan Susan McLaren Deirdre Mongan Corina Naughton Rhona O Connell Elaine Pierce Gary Rolfe Eileen Savage Anne Scott Emma Stokes Roger Watson Learning quantitative research is taken much for granted This is probably why there are fewer generic books on quantitative than qualitative research This book is long overdue Clearly written and well structured it takes us through the whole journey of a research project from developing research questions to presenting the findings passing through philosophical underpinnings recruitment of participants and ethical considerations Written by an array of well known researchers and teachers this book will certainly appeal to new as well as seasoned researchers Those who will use it will not be disappointed Kader Parahoo University of Ulster The title of this text is somewhat misleading It is not only an excellent and thorough guide to qualitative health research methods it is also an excellent introduction to all forms of qualitative research It takes the reader gently through theoretical and ethical concerns to the practicalities and benefits of utilising qualitative approaches As such it is that rare thing a text that can be used by novice researchers to learn their craft and a key reference resource for experienced research practitioners Dr John Cullen School of Business National University of Ireland Maynooth UK This is a first rate collection of essays that promotes an informed understanding of both underpinning principles and widely used techniques A great deal of effort has clearly been invested in co ordinating the contributions and this has delivered clarity complementarity and effective coverage This is a welcome carefully crafted and very accessible resource that will appeal to students and researchers in healthcare and beyond Martin Beirne Professor of Management and Organizational Behaviour University of Glasgow Adam Smith Business School UK Scientific Report, 1996 *Calculated Risks* Gerd Gigerenzer, 2015-11-10 At the beginning of the twentieth century H G Wells predicted that statistical thinking would be as necessary for citizenship in a technological world as the ability to read and write But in the twenty first century we are often overwhelmed by a baffling array of percentages and probabilities as we try to navigate in a world dominated by statistics Cognitive scientist Gerd Gigerenzer says that because we haven t learned statistical thinking

we don't understand risk and uncertainty In order to assess risk everything from the risk of an automobile accident to the certainty or uncertainty of some common medical screening tests we need a basic understanding of statistics Astonishingly doctors and lawyers don't understand risk any better than anyone else Gigerenzer reports a study in which doctors were told the results of breast cancer screenings and then were asked to explain the risks of contracting breast cancer to a woman who received a positive result from a screening The actual risk was small because the test gives many false positives But nearly every physician in the study overstated the risk Yet many people will have to make important health decisions based on such information and the interpretation of that information by their doctors Gigerenzer explains that a major obstacle to our understanding of numbers is that we live with an illusion of certainty Many of us believe that HIV tests DNA fingerprinting and the growing number of genetic tests are absolutely certain But even DNA evidence can produce spurious matches We cling to our illusion of certainty because the medical industry insurance companies investment advisers and election campaigns have become purveyors of certainty marketing it like a commodity To avoid confusion says Gigerenzer we should rely on more understandable representations of risk such as absolute risks For example it is said that a mammography screening reduces the risk of breast cancer by 25 percent But in absolute risks that means that out of every 1 000 women who do not participate in screening 4 will die while out of 1 000 women who do 3 will die A 25 percent risk reduction sounds much more significant than a benefit that 1 out of 1 000 women will reap This eye opening book explains how we can overcome our ignorance of numbers and better understand the risks we may be taking with our money our health and our lives
