Real Submanifolds In Complex Space And Their Mappings:

Real Submanifolds in Complex Space and Their Mappings (PMS-47) M. Salah Baouendi, Peter Ebenfelt, Linda Preiss Rothschild, 2016-06-02 This book presents many of the main developments of the past two decades in the study of real submanifolds in complex space providing crucial background material for researchers and advanced graduate students The techniques in this area borrow from real and complex analysis and partial differential equations as well as from differential algebraic and analytical geometry In turn these latter areas have been enriched over the years by the study of problems in several complex variables addressed here The authors M Salah Baouendi Peter Ebenfelt and Linda Preiss Rothschild include extensive preliminary material to make the book accessible to nonspecialists One of the most important topics that the authors address here is the holomorphic extension of functions and mappings that satisfy the tangential Cauchy Riemann equations on real submanifolds They present the main results in this area with a novel and self contained approach The book also devotes considerable attention to the study of holomorphic mappings between real submanifolds and proves finite determination of such mappings by their jets under some optimal assumptions The authors also give a thorough comparison of the various nondegeneracy conditions for manifolds and mappings and present new geometric interpretations of these conditions Throughout the book Cauchy Riemann vector fields and their orbits play a central role and are presented in a setting that is both general and elementary

Analytic and Algebraic Geometry Jeffery D. McNeal, Mircea Mustata, 2010-01-01 Analytic and algebraic geometers often study the same geometric structures but bring different methods to bear on them While this dual approach has been spectacularly successful at solving problems the language differences between algebra and analysis also represent a difficulty for students and researchers in geometry particularly complex geometry The PCMI program was designed to partially address this language gulf by presenting some of the active developments in algebraic and analytic geometry in a form suitable for students on the other side of the analysis algebra language divide One focal point of the summer school was multiplier ideals a subject of wide current interest in both subjects The present volume is based on a series of lectures at the PCMI summer school on analytic and algebraic geometry The series is designed to give a high level introduction to the advanced techniques behind some recent developments in algebraic and analytic geometry The lectures contain many illustrative examples detailed computations and new perspectives on the topics presented in order to enhance access of this material to non specialists Publisher s description Real

Analysis Peter Ebenfelt, Norbert Hungerbühler, Joseph J. Kohn, Ngaiming Mok, Emil J. Straube, 2011-01-30 This volume presents the proceedings of a conference on Several Complex Variables PDE s Geometry and their interactions held in 2008 at the University of Fribourg Switzerland in honor of Linda Rothschild Spherical Tube Hypersurfaces Alexander Isaev, 2011-03-31 We consider Levi non degenerate tube hypersurfaces in complex linear space which are spherical that is locally CR equivalent to the real hyperquadric Spherical hypersurfaces are characterized by the condition of the vanishing of the CR curvature form so such hypersurfaces are flat from the CR geometric viewpoint On the other hand such hypersurfaces are of interest from the point of view of affine geometry Thus our treatment of spherical tube hypersurfaces in this book is two fold CR geometric and affine geometric Spherical tube hypersurfaces turn out to possess remarkable properties For example every such hypersurface is real analytic and extends to a closed real analytic spherical tube hypersurface in complex space One of our main goals is to give an explicit affine classification of closed spherical tube hypersurfaces whenever possible In this book we offer a comprehensive exposition of the theory of spherical tube hypersurfaces starting with the idea proposed in the pioneering work by P Yang 1982 and ending with the new approach due to G Fels and W Kaup 2009
