Real-Variable Theory of Musielak-Orlicz Hardy Spaces Dachun Yang, Yiyu Liang, Luong Dang Ky, 2017-05-09 The main purpose of this book is to give a detailed and complete survey of recent progress related to the real variable theory of Musielak Orlicz Hardy type function spaces and to lay the foundations for further

applications The real variable theory of function spaces has always been at the core of harmonic analysis Recently motivated by certain questions in analysis some more general Musielak Orlicz Hardy type function spaces were introduced These spaces are defined via growth functions which may vary in both the spatial variable and the growth variable By selecting special growth functions the resulting spaces may have subtler and finer structures which are necessary in order to solve various endpoint or sharp problems This book is written for graduate students and researchers interested in function spaces and in particular Hardy type spaces

Real Analysis Methods for Markov Processes Kazuaki Taira, 2024
Zusammenfassung This book is devoted to real analysis methods for the problem of constructing Markov processes with boundary conditions in probability theory Analytically a Markovian particle in a domain of Euclidean space is governed by an integro differential operator called the Waldenfels operator in the interior of the domain and it obeys a boundary condition called the Ventcel Wentzell boundary condition on the boundary of the domain Most likely a Markovian particle moves both by continuous paths and by jumps in the state space and obeys the Ventcel boundary condition which consists of six terms corresponding to diffusion along the boundary an absorption phenomenon a reflection phenomenon a sticking or viscosity phenomenon and a jump phenomenon on the boundary and an inward jump phenomenon from the boundary More precisely we study a class of first order Ventcel boundary value problems for second order elliptic Waldenfels integro differential operators By using the Calder n Zygmund theory of singular integrals we prove the existence and uniqueness of theorems in the framework of the Sobolev and Besov spaces which extend earlier theorems due to Bony Courr ge Priouret to the vanishing mean oscillation VMO case Our proof is based on various maximum principles for second order elliptic differential operators with discontinuous coefficients in the framework of Sobolev spaces My approach is distinguished by the extensive use of the ideas and techniques characteristic of recent developments in the theory of singular integral operators due to Calder n and Zygmund Moreover we make use of an L_p variant of an estimate for the Green operator of the Neumann

problem introduced in the study of Feller semigroups by me The present book is amply illustrated 119 figures and 12 tables are provided in such a fashion that a broad spectrum of readers understand our problem and main results

Fourier Analysis Javier Duoandikoetxea, 2024-04-04 Fourier analysis encompasses a variety of perspectives and techniques This volume presents the real variable methods of Fourier analysis introduced by Calderón and Zygmund The text was born from a graduate course taught at the Universidad Autónoma de Madrid and incorporates lecture notes from a course taught by José Luis Rubio de Francia at the same university Motivated by the study of Fourier series and integrals classical topics are introduced such as the Hardy Littlewood maximal function and the Hilbert transform The remaining portions of the text are devoted to the study of singular integral operators and multipliers Both classical aspects of the theory and more recent developments such as weighted inequalities H^1 BMO spaces and the T1 theorem are discussed Chapter 1 presents a review of Fourier series and integrals Chapters 2 and 3 introduce two operators that are basic to the field the Hardy Littlewood maximal function and the Hilbert transform Chapters 4 and 5 discuss singular integrals including modern generalizations Chapter 6 studies the relationship between H^1 BMO and singular integrals Chapter 7 presents the elementary theory of weighted norm inequalities Chapter 8 discusses Littlewood Paley theory which had developments that resulted in a number of applications The final chapter concludes with an important result the T1 theorem which has been of crucial importance in the field This volume has been updated and translated from the Spanish edition that was published in 1995 Minor changes have been made to the core of the book however the sections Notes and Further Results have been considerably expanded and incorporate new topics results and references It is geared toward graduate students seeking a concise introduction to the main aspects of the classical theory of singular operators and multipliers Prerequisites include basic knowledge in Lebesgue integrals and functional analysis

Hypersingular Integrals and Their Applications Stefan Samko, 2001-10-25 Hypersingular integrals arise as constructions inverse to potential type operators and are realized by the methods of regularization and finite differences This volume develops these approaches in a comprehensive treatment of hypersingular integrals and their applications The author is a renowned expert on the topic He explains the basics before building more sophisticated ideas and his discussions include a description of hypersingular integrals as they relate to functional spaces Hypersingular Integrals and Their Applications also presents recent results and applications that will prove valuable to graduate students and researchers working in mathematical analysis

Elliptic Partial Differential Equations with Almost-Real Coefficients Ariel Barton, 2013-04-22 In this monograph the author investigates divergence form elliptic partial differential equations in two dimensional Lipschitz domains whose coefficient matrices have small but possibly nonzero imaginary parts and depend only on one of the two coordinates He shows that for such operators the Dirichlet problem with boundary data in L^q can be solved for q small enough and provide an endpoint result at $p = 1$

Pseudodifferential Operators and Wavelets over Real and p -adic Fields Nguyen Minh Chuong, 2018-11-28 This

monograph offers a self contained introduction to pseudodifferential operators and wavelets over real and p adic fields Aimed at graduate students and researchers interested in harmonic analysis over local fields the topics covered in this book include pseudodifferential operators of principal type and of variable order semilinear degenerate pseudodifferential boundary value problems BVPs non classical pseudodifferential BVPs wavelets and Hardy spaces wavelet integral operators and wavelet solutions to Cauchy problems over the real field and the p adic field *Theory of Besov Spaces* Yoshihiro

Sawano,2018-11-04 This is a self contained textbook of the theory of Besov spaces and Triebel Lizorkin spaces oriented toward applications to partial differential equations and problems of harmonic analysis These include a priori estimates of elliptic differential equations the T1 theorem pseudo differential operators the generator of semi group and spaces on domains and the Kato problem Various function spaces are introduced to overcome the shortcomings of Besov spaces and Triebel Lizorkin spaces as well The only prior knowledge required of readers is familiarity with integration theory and some elementary functional analysis Illustrations are included to show the complicated way in which spaces are defined Owing to that complexity many definitions are required The necessary terminology is provided at the outset and the theory of distributions L_p spaces the Hardy Littlewood maximal operator and the singular integral operators are called upon One of the highlights is that the proof of the Sobolev embedding theorem is extremely simple There are two types for each function space a homogeneous one and an inhomogeneous one The theory of function spaces which readers usually learn in a standard course can be readily applied to the inhomogeneous one However that theory is not sufficient for a homogeneous space it needs to be reinforced with some knowledge of the theory of distributions This topic however subtle is also covered within this volume Additionally related function spaces Hardy spaces bounded mean oscillation spaces and Hölder continuous spaces are defined and discussed and it is shown that they are special cases of Besov spaces and Triebel Lizorkin spaces
