Realistic Compiler Generation:

Realistic Compiler Generation Peter Lee, 1989 In this book Peter Lee provides a complete description and survey of the field of semantics based compiler generation and presents a new method for expressing the formal semantics of programming languages that allows realistic compilers to be generated automatically The method Lee describes has two main advantages over previous methods First it allows compilers to be generated automatically The compilers are realistic in the sense that they compile programs as efficiently as hand crafted compilers do and the object programs they produce run as efficiently as the object programs produced by hand crafted compilers The second advantage is that it makes it easier to comprehend and write the semantics than other methods The book demonstrates a working compiler generator called MESS which is used to generate a realistic compiler for a Pascal like language The generated compiler is then compared with several hand crafted compilers and shown to have at least comparable and in some cases superior performance Peter Lee is Assistant Professor of Computer Science at Carnegie Mellon University Realistic Compiler Generation is included in the series Foundations of Computing edited by Michael Garey and Albert Meyer

Compiler Construction Peter A. Fritzson, 1994-03-23 The International Conference on Compiler Construction provides a forum for presentation and discussion of recent developments in the area of compiler construction language implementation and language design Its scope ranges from compilation methods and tools to implementation techniques for specific requirements on languages and target architectures It also includes language design and programming environment issues which are related to language translation There is an emphasis on practical and efficient techniques This volume contains the papers selected for presentation at CC 94 the fifth International Conference on Compiler Construction held in Edinburgh U K in April 1994

Partial Evaluation and Automatic Program Generation Neil D. Jones, Carsten K. Gomard, Peter Sestoft, 1993 Partial evaluation reconciles generality with efficiency by providing automatic specialization and optimization of programs This book covers the entire field of partial evaluation provides simple and complete algorithms and demonstrates that specialization can increase efficiency

Advanced Compiler Design Implementation Steven Muchnick, 1997-08 Computer professionals who need to understand advanced techniques for designing efficient compilers will need this book It provides complete coverage of advanced issues in the design of compilers with a major emphasis on creating highly optimizing scalar compilers It includes interviews and printed documentation from designers and implementors of real world compilation systems

Compiler Technology Derek Beng Kee Kiong, 2012-12-06 Compiler technology is fundamental to computer science since it provides the means to implement many other tools It is interesting that in fact many tools have a compiler framework they accept input in a particular format perform some processing and present output in another format Such tools support the abstraction process and are crucial to productive systems development The focus of Compiler Technology Tools Translators and Language Implementation is to enable quick development of analysis tools Both lexical scanner and parser

generator tools are provided as supplements to this book since a hands on approach to experimentation with a toy implementation aids in understanding abstract topics such as parse trees and parse conflicts Furthermore it is through hands on exercises that one discovers the particular intricacies of language implementation Compiler Technology Tools Translators and Language Implementation is suitable as a textbook for an undergraduate or graduate level course on compiler technology and as a reference for researchers and practitioners interested in compilers and language implementation

Compiler Construction ,2003 Modern Compiler Design

Dick Grune, Kees van Reeuwijk, Henri E. Bal, Criel J.H. Jacobs, Koen Langendoen, 2012-07-20 Modern Compiler Design makes the topic of compiler design more accessible by focusing on principles and techniques of wide application By carefully distinguishing between the essential material that has a high chance of being useful and the incidental material that will be of benefit only in exceptional cases much useful information was packed in this comprehensive volume The student who has finished this book can expect to understand the workings of and add to a language processor for each of the modern paradigms and be able to read the literature on how to proceed The first provides a firm basis the second potential for growth

Retargetable Code Generation for Digital Signal Processors Rainer Leupers, 2013-03-09 According to market analysts the market for consumer electronics will continue to grow at a rate higher than that of electronic systems in general The consumer market can be characterized by rapidly growing complexities of applications and a rather short market window As a result more and more complex designs have to be completed in shrinking time frames A key concept for coping with such stringent requirements is re use Since the re use of completely fixed large hardware blocks is limited to subproblems of system level applications for example MPEG 2 flexible programmable processors are being used as building blocks for more and more designs Processors provide a unique combination of features they provide flexibility and re use The processors used in consumer electronics are however in many cases different from those that are used for screen and keyboard based equipment such as PCs For the consumer market in particular efficiency of the product plays a dominating role Hence processor architectures for these applications are usually

highly optimized and tailored towards a certain application domain
