the context of malformation and identity as well as the development of the bony skull in the following chapters These chapters provide stepping stones to guide readers through the book There are new fields of research and technological developments in which Anatomy and Physiology lose track of progress One of the examples discussed is the automated face recognition In some respects e g when it comes to cancers and malformations our understanding of the head and neck and the resulting therapeutic outcomes have been extremely disappointing In others such as injuries following car accidents there have been significant advances in our understanding of head and neck dysfunctions and their treatment Therefore head movements also during sleep and head and neck reflexes are discussed The book makes unequivocal distinctions between correct and incorrect assumptions and provides a critical review of alternative clinical methods for head and neck dysfunctions such as physiotherapy and lymphatic drainage for cancers Moreover it discusses the consequences of various therapeutic measures for physiological and biomechanical conditions as well as puberty and aging Lastly it addresses important biomedical engineering developments for hearing e g cochlear implants and for applying vestibular cerebellar effects for vision
