Carcinogenesis, 2nd edition Prasanna K. Santhekadur, Bubu Ama Banini, Rohini Mehta, 2024-09-19 Hepatocellular carcinoma

HCC is the most common cancer of the liver and the third most cause of cancer related deaths worldwide. The 5 year survival of HCC is less than 20% making HCC the second most lethal malignancy the first being pancreatic cancer. HCC usually occurs in patients with chronic liver disease in association with a variety of risk factors including chronic liver infection with hepatitis B virus or hepatitis C virus, excessive consumption of alcohol, overeating, obesity and nonalcoholic fatty liver disease, other metabolic liver diseases including Wilson's disease, hemochromatosis and alpha 1 antitrypsin deficiency and environmental toxins such as aflatoxins. Tobacco use and human immunodeficiency virus infection also increases the risk of HCC. The heterogeneity of HCC associated with different etiologies affects tumor initiation, development and progression thus limiting the identification of consistent or routinely occurring genetic abnormalities characteristic of this malignancy. Nevertheless, sustained inflammation, hepatocyte regeneration and apoptosis occurring in chronic liver disease results in fibrosis and ultimately cirrhosis favoring genetic and epigenetic modifications that lead to the formation of dysplastic nodules and eventually oncogenesis. Identification of novel diagnostic and prognostic biomarkers for HCC is an unmet need in this current era. The aim of this Research Topic is to provide insights on novel aspects of HCC diagnosis, prognostication and therapy with an emphasis on recent and up to date findings from the scientific literature. Genetic and molecular signatures arising from HCC in association with specific etiologies and implications for cancer screening and surveillance will be discussed. As indicated, sub topics listed below: Original articles, Reviews and Mini Review articles will address all areas of HCC relevant not only to basic and clinical researchers but also to practitioners in various fields of medicine.

- 1 Epidemiology of Hepatocellular carcinoma
- 2 Risk factors for hepatocellular carcinoma
- 3 Nonalcoholic Fatty Liver Disease and Hepatocellular Carcinoma
- 4 Animal models for studying hepatocellular carcinoma
- 5 Hepatocellular Carcinoma Oncogenes
- 6 Tumor suppressors and Novel regulators of Hepatocellular Carcinoma
- 7 MicroRNA and Hepatocellular Carcinoma
- 8 Circulating biomarkers of Hepatocellular Carcinoma

[Recent Advances In Prostate Cancer: Basic Science Discoveries And Clinical Advances](#) Donald J Tindall, Peter T Scardino, 2011-07-19 This book effectively summarizes our knowledge of recent advances in prostate cancer. It focuses on our state of the art understanding of risk factors, prevention, detection, prognosis and treatment of prostate cancer and identifies basic science findings that are being translated into clinical practice. In addition, the book singles out key areas of research that have potential for clinical translation. Both basic scientists and clinicians will be invited to provide up to date reviews in each area of prostate cancer. During the last decade, the pace of clinical discovery and the scientific advances in prostate cancer have been very rapid. For instance, currently there are more than 100 drugs in the pharmaceutical pipeline that have the potential for clinical management of prostate cancer. Therefore, it has been very difficult for clinicians and basic scientists to keep pace with the field as a whole. Recently, some of these discoveries are

already having an impact on clinical practice For example the discovery of the androgen receptor gene amplification in prostate cancer has led to the development of a super antiandrogen which is being tested in clinical trials Also recent knowledge of androgen synthesis in prostate cancer cells has led to clinical trials with steroid metabolism inhibitors Finally robotic surgery has also dramatically changed clinical practice Thus this important book serves to provide readers with a one stop overview of the field of prostate cancer research and its translation into the clinical arena
