**Non-Classical Elastic Solids** Michele Ciarletta,D. Iesan,2020-11-25 Problems concerning non classical elastic solids continue to attract the attention of mathematicians scientists and engineers Research in this area addresses problems concerning many substances such as crystals polymers composites ceramics and blood This comprehensive accessible work brings together recent research in this field and will be of great interest to mathematicians physicists and other specialists working in this area **Integral Methods in Science and Engineering** Christian Constanda,1994-12-12 Integral methods are among the most powerful techniques for investigating real life phenomena translated into mathematical models This book contains a number of contributions to the development and application of such techniques in the context of linear and nonlinear problems in elasticity fluid dynamics and mathematical physics The procedures featured in the volume include vortex methods analytic and numerical methods hybrid numerical schemes integral equation approaches and conservation laws The articles were presented by their authors at the Third International Conference on Integral Methods in Science and Engineering IMSE 93 27 29 August 1993 at Tohoku University Sendai Japan [Topics in Abstract Differential Equations II](#) S D Zaidman,1995-03-20 This looks at a new branch of operator theory and partial differential equations which in recent years has become a rapidly growing field of mathematics Well posed problems are studied in the context of the theory of operator groups and semigroups as well as the framework of time dependent evolution equations Non well posed problems are also considered *Topological Circle Planes and Topological Quadrangles* Andreas E Schroth,1995-11-03 This research note presents a complete treatment of the connection between topological circle planes and topological generalized quadrangles The author uses this connection to provide a better understanding of the relationships between different types of circle planes and to solve a topological version of the problem of Apollonius Topological Circle Planes and Topological Quadrangles begins with a foundation in classical circle planes and the real symmetric generalized quadrangle and the connection between them This provides a solid base from which the author offers a more generalized exploration of the topological case He also compares this treatment to the finite case Subsequent chapters examine Laguerre M bius and Minkowski planes and

their respective relationships to antiregular quadrangles The author addresses the Lie geometry of each and discuss the relationships of circle planes the sisters of M bius Laguerre and Minkowski planes and concludes by solving a topological version of the problem of Apollonius in Laguerre M bius and Minkowski planes The treatment offered in this volume offers complete coverage of the topic The first part of the text is accessible to anyone with a background in analytic geometry while the second part requires basic knowledge in general and algebraic topology Researchers interested in geometry particularly in topological geometry will find this volume intriguing and informative Most of the results presented are new and can be applied to various problems in the field of topological circle planes Features      **Propagation of a Curved Shock and Nonlinear Ray Theory** Prasad,1993-09-27 Phoolan Prasad s book contains theoretical developments in the study of the propagation of a curved nonlinear wave front and shock front particularly in the caustic region It should be an invaluable reference source for researchers in nonlinear waves fluid dynamics especially gas dynamics mathematical physics aeronautical chemical and mechanical engineering      A Survey of Preconditioned Iterative Methods Are Magnus Bruaset,2018-12-13 The problem of solving large sparse linear systems of algebraic equations is vital in scientific computing even for applications originating from quite different fields A Survey of Preconditioned Iterative Methods presents an up to date overview of iterative methods for numerical solution of such systems Typically the methods considered are w

Common Zeros of Polynominals in Several Variables and Higher Dimensional Quadrature Yuan Xu,1994-10-10 Presents a systematic study of the common zeros of polynomials in several variables which are related to higher dimensional quadrature The author uses a new approach which is based on the recent development of orthogonal polynomials in several variables and differs significantly from the previous ones based on algebraic ideal theory Featuring a great deal of new work new theorems and in many cases new proofs this self contained work will be of great interest to researchers in numerical analysis the theory of orthogonal polynomials and related subjects      Singularities of Solutions of Second-Order Quasilinear Equations Laurent Veron,1996-08-01 This text examines the singularity problem for solutions of elliptic and parabolic quasilinear equations of second order      Variational Methods in Lorentzian Geometry Antonio Masiello,2017-10-05 Appliies variational methods and critical point theory on infinite dimenstional manifolds to some problems in Lorentzian geometry which have a variational nature such as existence and multiplicity results on geodesics and relations between such geodesics and the topology of the manifold      **Dynamical Systems** Rafael Labarca,R Bamon,L Lewowicz,J Palis,1993-02-22 In at least five countries in Latin America high level research in the field in taking place To stimulate this development both at home and abroad Chilean mathematicians have been promoting international meetings like the III International School of Dynamical Systems which took place at the Universidad de Santiago de Chile Santiago in 1990 A number of distinguished mathematicians were present at the meeting side by side with younger people interested in the subject Several of the participants submitted original contributions to these proceedings of the school The topics of the papers are central to

dynamics ergodic theory real and complex foliations fractal dimensions polynomial vector fields hyperbolicity and expansive maps Notes on the ergodic theory of plane billiards are also included This book will be of particular interest to researchers and graduate students working in mathematics particularly in ordinary differential equations bifurcation theory and dynamical systems Also those working in mathematical physics and physics      *Backward Stochastic Differential Equations* N El Karoui, Laurent Mazliak, 1997-01-17 This book presents the texts of seminars presented during the years 1995 and 1996 at the Universit Paris VI and is the first attempt to present a survey on this subject Starting from the classical conditions for existence and unicity of a solution in the most simple case which requires more than basic stochartic calculus several refinements on the hypotheses are introduced to obtain more general results      **Computational Methods for Fluid-Structure Interaction** Jean-Marie Crolet, Roger Ohayon, 1994-04-05 Fluid structure interaction is a new theme of investigation in computational methods covering many applications in both engineering and medical sciences This book deals with various examples of interaction between a fluid and a structure and each author presents for the different problems involved the method which is considered to be the most appropriate
