Recent And Emerging Theoretical Frameworks For Research On Classroom Learning Contributions And Limitations:

Recent and Emerging Theoretical Frameworks for Research on Classroom Learning H. Marshall, Hermine H. Marshall, 1997-01-01 Over the past decade a number of new conceptualizations of learning have entered the literature These include various forms of constructivism such as cognitive constructivism and social constructivism as well as sociocultural approaches to learning Unfortunately differences among these approaches in addition to differences between these approaches and more familiar cognitive psychological and information processing frameworks have sometimes been blurred or misconstrued as those attempting to understand the new have incorporated aspects of these approaches into their previously held conceptualizations without adequately distinguishing subtle but critical differences The purposes of this special issue are to shed greater light on differences among new and familiar approaches to understanding classroom learning and to highlight the contributions to and limitations of these approaches for understanding classroom learning To achieve these purposes contributors were asked to present key features as well as strengths and limitations of various frameworks for understanding classroom learning These articles represent the current though often fluid thinking in the ongoing process of evolving knowledge about classroom learning

Perceiving, Behaving, Becoming H. Jerome Freiberg, 1999 In 1962 ASCD's *Perceiving Behaving Becoming A New Focus for Education* provided bold insights on the psychological foundation of education Some of the most compelling questions in education today were first asked in this groundbreaking work which included chapters by preeminent scholars Arthur Combs Earl Kelley Abraham Maslow and Carl Rogers Although we cannot predict what current information future generations will need to know the book's Introduction states creating schools that encourage the development of persons with adequate fully functioning personalities is the best way to contribute some degree of stability to an uncertain future Decades later in preparing *Perceiving Behaving Becoming Lessons Learned* editor H. Jerome Freiberg invited distinguished scholars in the field of affective humanistic education and psychology to review these four chapters from the 1962 book to provide a context for lessons learned for future generations of educators Each author in *Lessons Learned* works with teachers administrators and schools and offers a distinct perspective on the human side of teaching and learning Their analyses raise significant issues such as whether an emphasis on academic standards

ignores the education of the whole student and what schools that are committed to an environment of trust and respect look like Lessons Learned promises to further the cause of education that focuses on the person By understanding the evolution of our educational past says Freiberg perhaps we can shape a future that will better meet the needs of generations that come after us

Deep Learning in Introductory Physics Mark J. Lattery, 2016-10-01
Deep Learning in Introductory Physics Exploratory Studies of Model Based Reasoning is concerned with the broad question of how students learn physics in a model centered classroom The diverse creative and sometimes unexpected ways students construct models and deal with intellectual conflict provide valuable insights into student learning and cast a new vision for physics teaching This book is the first publication in several years to thoroughly address the coherence versus fragmentation debate in science education and the first to advance and explore the hypothesis that deep science learning is regressive and revolutionary Deep Learning in Introductory Physics also contributes to a growing literature on the use of history and philosophy of science to confront difficult theoretical and practical issues in science teaching and addresses current

international concern over the state of science education and appropriate standards for science teaching and learning The book is divided into three parts Part I introduces the framework agenda and educational context of the book An initial study of student modeling raises a number of questions about the nature and goals of physics education Part II presents the results of four exploratory case studies These studies reproduce the results of Part I with a more diverse sample of students under new conditions a public debate peer discussions and group interviews and with new research prompts model building software bridging tasks and elicitation strategies Part III significantly advances the emergent themes of Parts I and II through historical analysis and a review of physics education research

ENDORSEMENTS In *Deep Learning in Introductory Physics* Lattery describes his extremely innovative course in which students ideas about motion are elicited evaluated with peers and revised through experiment and discussion The reader can see the students deep engagement in constructive scientific modeling while students deal with counter intuitive ideas about motion that challenged Galileo in many of the same ways Lattery captures students engaging in scientific thinking skills and building difficult conceptual understandings at the same time This is the double outcome that many science educators have been searching for The case studies provide inspiring examples of innovative course design student sensemaking and reasoning and deep conceptual change John Clement University of Massachusetts Amherst Scientific Reasoning Research Institute *Deep Learning in Introductory Physics* is an extraordinary book and an important intellectual achievement in many senses It offers new perspectives on science education that will be of interest to practitioners to education researchers as well as to philosophers and historians of science Lattery combines insights into model based thinking with instructive examples from the history of science such as Galileo s struggles with understanding accelerated motion to introduce new ways of teaching science The book is based on first hand experiences with innovative teaching methods reporting student s ideas and discussions about motion as an illustration of how modeling and model building can help understanding science Its lively descriptions of these experiences and its concise presentations of insights backed by a rich literature on education cognitive science and the history and philosophy of science make it a great read for everybody interested in how models shape thinking processes Dr J rgen Renn Director Max Planck Institute for the History of Science *Annual Meeting Program American Educational Research Association, 1995*
