Recent Advances in Differential Equations H-H Dai,P.L. Sachdev,2020-01-30 The First Pan China Conference on Differential Equations was held in Kunming China in June of 1997 Researchers from around the world attended including representatives from the US Canada and the Netherlands but the majority of the speakers hailed from China and Hong Kong This volume contains the plenary lectures and invited talks presented at that conference and provides an excellent view of the research on differential equations being carried out in China Most of the subjects addressed arose from actual applications and cover ordinary and partial differential equations Topics include **Evolution Equations, Control Theory, and Biomathematics** Philippe Clement,G Lumer,1993-11-23 Based on the Third International Workshop Conference on Evolution Equations Control Theory and Biomathematics held in Hans sur Lesse Belgium The papers examine important advances in evolution equations related to physical engineering and biological applications **Recent Developments in Algebraic Geometry** Hamid Abban,Gavin Brown,Alexander Kasprzyk,Shigefumi Mori,2022-11-03 Written in celebration of Miles Reid s 70th birthday this illuminating volume contains 11 papers by leading mathematicians in and around algebraic geometry broadly related to the themes and interests of Reid s varied career Just as in Reid s own scientific output some of the papers give comprehensive accounts of the state of the art of foundational matters while others give expositions of subject areas or techniques in concrete terms Reid has been one of the major expositors of algebraic geometry and a great influence on many in this field this book hopes to inspire a new generation of graduate students and researchers in his tradition **Recent Developments in Quantum Optics** R. Inguva,2012-12-06 This volume is composed of papers invited and contributed presented at the International Conference on Coherence and Quantum Optics held at the University of Hyderabad January 5 January 10 1991 It has been organized by Professor Girish Agarwal and his colleagues at the School of Physics University of Hyderabad Hyder abad India under partial support from the Department of Science and Technology Government of India International Center for Theoretical Physics Trieste Italy and the National Science Foundation USA Without the untiring efforts of Prof Girish Agarwal and the members of his quantum office group the Conference and the present volume would not have been possible Some extraordinary circumstances resulted in a delay of the publication of the present volume Our sincere apologies to all the authors We deeply regret the inconvenience caused due to the delay A debt of gratitude is due to Ms Kim Bella for the excellent typing job of the different versions and the final version of the manuscript It is a pleasure to acknowl edge the efforts of Ms Pat Vann Mr Greg Safford and Mr Eric Katz of the Plenum Publishing without whose interest and persistence this volume would not have been possible v CONTENTS QUANTUM

OPTICS THEORY The Quantum Mechanics of Particles in Time Dependent Quadrupole Fields Roy J Glauber 1 Localization of Photons in Random and Quasiperiodic Media S Dutta Gupta 15 Enhanced Fundamental Linewidth of a Laser Due to Outcoupling W A Hamel M P van Exter and J P Woerdman **Recent developments in the Navier-Stokes problem** Pierre Gilles Lemarie-Rieusset,2002-04-26 The Navier Stokes equations fascinating fundamentally important and challenging Although many questions remain open progress has been made in recent years The regularity criterion of Caffarelli Kohn and Nirenberg led to many new results on existence and non existence of solutions and the very active search for mild solutions in the 1990 s culminated in the theorem of Koch and Tataru that in some ways provides a definitive answer Recent Developments in the Navier Stokes Problem brings these and other advances together in a self contained exposition presented from the perspective of real harmonic analysis The author first builds a careful foundation in real harmonic analysis introducing all the material needed for his later discussions He then studies the Navier Stokes equations on the whole space exploring previously scattered results such as the decay of solutions in space and in time uniqueness self similar solutions the decay of Lebesgue or Besov norms of solutions and the existence of solutions for a uniformly locally square integrable initial value Many of the proofs and statements are original and to the extent possible presented in the context of real harmonic analysis Although the existence regularity and uniqueness of solutions to the Navier Stokes equations continue to be a challenge this book is a welcome opportunity for mathematicians and physicists alike to explore the problem s intricacies from a new and enlightening perspective Recent Developments in Micromechanics D.R. Axelrad,Wolfgang Muschik,2012-12-06 This volume contains the lectures presented at the mini symposium on Micromechanics held in conjunction with the CSME Mechanical Engineer ing Forum 1990 between the 3rd and 8th June 1990 at the University of Toronto Canada The expressed purpose of this symposium was to discuss some recent developments in the Micromechanics of Materials and how ad vances in this field now relate to the solution of practical engineer ing problems Due to the time limit set for this section of the Engineer ing Forum as well as the restriction on the number of papers to be pre sented it was not possible to cover a much wider range of topics How ever an attempt was made to include the most important advances asso ciated with the progress made in micromechanics in its application to material science and engineering over the past decade Thus the topics are concerned with the fundamental aspects of the thermodynamics of structured solids part I the micromechanical behaviour of alloys part II the modelling of the material behaviour on the basis of continuum theory part III and finally the important new approach to the characterization of various mate rials and their responses to external agencies by the use of proba bilistic micromechanics part IV We would like to take this opportunity to thank the Chairman of the Organizing Committee Prof F P J Rimrott and the President of the CSME Prof T S **New Trends in the Applications of Differential Equations in Sciences** Angela Slavova,2024-06-15 This book convenes peer reviewed selected papers presented at the Tenth International Conference New Trends in the Applications of Differential Equations in Sciences

NTADES held in Saints Constantine and Helena Bulgaria July 17 20 2023 Contributions are devoted to many applications of differential equations in different fields of science A number of phenomena in nature physics chemistry biology and in society economics result in problems leading to the study of linear and nonlinear differential equations stochastic equations statistics analysis numerical analysis optimization and more The main topics are presented in the five parts of the book applications in mathematical physics mathematical biology financial mathematics neuroscience and fractional analysis In this volume the reader will find a wide range of problems concerning recent achievements in both theoretical and applied mathematics The main goal is to promote the exchange of new ideas and research between scientists who develop and study differential equations and researchers who apply them to solve real life problems The book promotes basic research in mathematics leading to new methods and techniques useful for applications of differential equations **Recent Development of Aerodynamic Design Methodologies** Kozo Fujii,George Dulikravich,2013-04-17 Computational Fluid Dynamics CFD has made remarkable progress in the last two decades and is becoming an important if not inevitable analytical tool for both fundamental and practical fluid dynamics research The analysis of flow fields is important in the sense that it improves the researcher s understanding of the flow features CFD analysis also indirectly helps the design of new aircraft and or spacecraft However design methodologies are the real need for the development of aircraft or spacecraft They directly contribute to the design process and can significantly shorten the design cycle Although quite a few publications have been written on this subject most of the methods proposed were not used in practice in the past due to an immature research level and restrictions due to the inadequate computing capabilities With the progress of high speed computers the time has come for such methods to be used practically There is strong evidence of a growing interest in the development and use of aerodynamic inverse design and optimization techniques This is true not only for aerospace industries but also for any industries requiring fluid dynamic design This clearly shows the matured engineering need for optimum aerodynamic shape design methodologies Therefore it seems timely to publish a book in which eminent researchers in this area can elaborate on their research efforts and discuss it in conjunction with other efforts **Recent Advances in Partial Differential Equations and Applications** Vicenţiu D.
