

Recent Developments in Alexithymia Theory and Research

Graeme J Taylor, MD¹

Objectives: To review recent developments in alexithymia theory and research that are relevant to the field of psychosomatic medicine.

Methods: Articles were selected from the alexithymia literature published over the past decade that describe advances in the theoretical understanding of alexithymia or report empirical investigations of the relationships of the construct with emotion regulation and with somatic illness and disease. Empirical investigations of the neural correlates of alexithymia were reviewed also, as were studies that explore therapeutic attempts to modify alexithymic characteristics.

Results: The nature features of the alexithymia construct are now thought to reflect deficits in the cognitive processing and regulation of emotions. This is supported by studies showing that alexithymia is associated with maladaptive styles of emotion regulation, low emotional intelligence, a bidirectional interhemispheric transfer deficit, and reduced rapid eye movement (REM) density (number of eye movements divided by number of REM periods). Although empirical evidence demonstrates that alexithymia is associated with several somatic disorders, more prospective studies are required to establish the direction of causality. Preliminary data suggest that psychotherapies involving specific techniques to enhance emotional awareness and integrate symbolic and subymbolic elements of emotion schemas may be effective in reducing alexithymic characteristics.

Conclusions: Alexithymia is proving to be a theoretically useful construct for exploring the role of personality and emotions in the pathogenesis of certain somatic illnesses and diseases.

(Can J Psychiatry 2006;45:134-142)

Key Words: alexithymia, emotion regulation, psychosomatic medicine

Alexithymia is a multifaceted personality construct that has been associated with various medical and psychiatric disorders. The construct was introduced by Nemiah and Sifneos during the early 1970s (1,2) and has gradually captured the attention of many psychiatrists and psychologists throughout the world. In particular, during the past 10 to 15 years, a substantial body of theory and research has emerged on the topic. While about 120 articles were published on alexithymia by the mid-1980s, a recent search of the PsycInfo database revealed well over 700 journal articles on alexithymia.

Many of the early studies on alexithymia are of questionable validity and generalizability, since they were conducted with rather hastily constructed measures that subsequently were shown to lack reliability and validity (3). Moreover, these early studies were initiated before the validity of the

alexithymia construct itself was established. Over the past decade, however, measurement-based and experimental studies have yielded considerable empirical support for the validity of the alexithymia construct (3-5). In addition, the development of the Toronto Alexithymia Scale (TAS) and the revised Twenty-Item Toronto Alexithymia Scale (TAS-20) provided reliable and valid methods for measuring the construct (6-8); these self-report scales have been cross-validated in diverse cultures and are now the most widely used measures of alexithymia (3,9-13).

The validation and measurement of the alexithymia construct have been described in detail in several previous contributions (3,4,14,15); this review focuses on research and theoretical developments over the past decade that are relevant to psychosomatic medicine. With a few exceptions (which will be noted), I will include only studies that used the TAS or TAS-20 to measure alexithymia.

What Is Alexithymia?

The alexithymia construct encompasses a cluster of cognitive and affective characteristics that were observed initially

Recent Developments in the Inverse Galois Problem Jointsummerresearchconf Onrecentdevel Intheinverse,1995-07-30

This book contains the refereed proceedings of the AMS IMS SIAM Joint Summer Research Conference on Recent Developments in the Inverse Galois Problem held in July 1993 at the University of Washington Seattle A new review of Serre's Topics in Galois Theory serves as a starting point The book describes the latest research on explicit presentation of the absolute Galois group of the rationals Containing the first appearance of generalizations of modular curves the book presents applications that demonstrate the full scope of the Inverse Galois Problem In particular the papers collected here show the ubiquity of the applications of the Inverse Galois Problem and its compelling significance The book will serve as a guide to progress on the Inverse Galois Problem and as an aid in using this work in other areas of mathematics This includes coding theory and other finite field applications Group theory and a first course in algebraic curves are sufficient for understanding many papers in the volume Graduate students will find this an excellent reference to current research as it contains a list of problems appropriate for thesis material in arithmetic geometry algebraic number theory and group theory

Recent Developments in Criminological Theory Scott A. Lukas,2017-07-05 This volume contains recent and cutting edge articles from leading criminological theorists The book is organized into ten sections each representing the latest in the multi disciplinary orientations representing a cross section of contemporary criminological theory These sections include 1 Classical and Rational Choice 2 Biological and Biosocial 3 Psychological 4 Social Learning and Neutralization 5 Social Control 6 Social Ecology Sub cultural and Cultural 7 Anomie and Strain 8 Conflict and Radical 9 Feminist and Gender 10 Critical Criminologies Anarchist Postmodernist Peacemaking The articles were selected based on their contributions to advancing the field including ways in which the authors of each chapter understand the current theoretical tendencies of their respective approaches and how they envision the future of their theories Because of this the articles focus on theory rather than empirical research Of particular note is the tendency toward integration of different perspectives as described by editors Henry and Lukas in their original introduction to this volume

Exploration in Development Issues Nurul Islam,2017-11-30 This title was first published in 2003 Nurul Islam currently head of economic and social policy at the FAO UN and a key advisor at

the International Food Policy Research Institute has been a renowned expert on economic development for the past thirty years. Over that time he has researched and written about a wide range of economic development issues focussing mainly on policy. For the first time ever his most important writings have been brought together in this volume reflecting not only Professor Islam's own views on particular issues but also providing a unique overview of the key debates and discussions taking place among academic economists and policy analysts over the past three decades. The collection is divided into three main sections: trade and aid, development strategy and food security, the section on food security being the most recent. It discusses food security in a broad sense covering issues of availability and growth in food production, access or entitlement of individuals or households to basic food and variability in food supplies and prices. In the section on Development Strategy Professor Islam highlights how theoretical argument has veered away from organized development planning models which proved so important in the 1960s. He questions the role of models and policies throughout the decades and following articles written in the 1970s or 80s he includes articles he has recently completed assessing the previous ones from his current perspective. In the final section on Trade and Aid he follows the academic debate on trade and exchange rate policies in developing countries from the 1960s to the progress of the WTO forums of today. This is a wide ranging and thought provoking volume. No matter whether the subject in question was examined in the 1960s or currently Professor Islam provides a challenging and insightful analysis and even the earliest articles retain relevance and will be of continuing interest.

New Developments in Productivity Analysis Charles R. Hulten, Edwin R. Dean, Michael Harper, 2007-11-01. The productivity slowdown of the 1970s and 1980s and the resumption of productivity growth in the 1990s have provoked controversy among policymakers and researchers. Economists have been forced to reexamine fundamental questions of measurement technique. Some researchers argue that econometric approaches to productivity measurement usefully address shortcomings of the dominant index number techniques while others maintain that current productivity statistics underreport damage to the environment. In this book the contributors propose innovative approaches to these issues. The result is a state of the art exposition of contemporary productivity analysis. Charles R. Hulten is professor of economics at the University of Maryland. He has been a senior research associate at the Urban Institute and is chair of the Conference on Research in Income and Wealth of the National Bureau of Economic Research. Michael Harper is chief of the Division of Productivity Research at the Bureau of Labor Statistics. Edwin R. Dean, formerly associate commissioner for Productivity and Technology at the Bureau of Labor Statistics, is adjunct professor of economics at The George Washington University. *New Analytic and Geometric Methods in Inverse Problems* Kenrick Bingham, Yaroslav V. Kurylev, E. Somersalo, 2013-04-17. In inverse problems the aim is to obtain via a mathematical model information on quantities that are not directly observable but rather depend on other observable quantities. Inverse problems are encountered in such diverse areas of application as medical imaging, remote sensing, material testing, geosciences and financing. It has become evident that new ideas coming from differential
