Marine Outfall Systems Mahad Baawain, B.S. Choudri, Mushtaque Ahmed, Anton Purnama, 2015-08-31 This book collects current scientific information on advanced technologies and management practices associated with the desalination industry in the Middle East and elsewhere around the world. The book opens with an introductory chapter which briefly recounts the history of desalination and describes the current state of development in the field. Part I Desalination Systems includes ten chapters which describe a variety of techniques and designs intended not only to minimize the impact of desalination but also to save energy and use natural resources to maximize the output of integrated desalination systems. Among the highlights are a chapter on the use of ceramic membrane technology for sustainable oil water production, a case study on the use of solar heating systems in desalination technology in Oman, discussion of fouling and its effect on design and performance of desalination systems, a review of shore approaches and sea lines with case studies from Australia and Germany, and a discussion of the integration of desalination technology with renewable energy for climate change abatement in the Middle East and North Africa region. Part II Environmental Systems includes among others a chapter on regulating the use of water resources and desalination technology on a regional scale, reducing the carbon footprint of desalination with examples from Australia, a description of desalination for irrigation in the Souss Massa region in the south of Morocco, a study of the impact of the coastal intake environment on operating conditions of thermal desalination plants in the United Arab Emirates, a discussion of hydrodynamic and thermal dispersion modeling of the effluent in a coastal channel with a case study from Oman, and a mathematical model study of effluent disposal from a desalination plant in the marine environment at Tuticorin in India. The book aims to inspire developments in desalination technologies which are specifically aimed at reducing energy consumption and cost and minimizing environmental impact.

Recent Developments in Ion Exchange Peter A. Williams, M.J. Hudson, 2012-12-06 These Conference Proceedings deal with the papers presented at the International Conference on Ion Exchange Processes ION EX 90 which was held at The North East Wales Institute of Higher Education 9-11 July 1990. The camera-ready paper format was chosen so that delegates could receive their copy on arrival at the Conference. The Proceedings include reviews of biological materials, inorganic ion exchangers, the nuclear industry, theoretical aspects, and new advances. In addition, there are research papers dealing with industrial ion exchange procedures and new materials. The Proceedings should therefore be of interest to those who need to be brought up to date in the various aspects of processes which involve ion exchange and ion chromatography, which are now accepted as important in analysis, separation processes, and process control. In each of these areas, there have been important developments which are herein described. As Editors, we should like to express our thanks to the individual authors for preparing their manuscripts in the required format and to Haydn Hughes and Linda Sneddon for their invaluable assistance in compiling these Proceedings.

Recent Advances in the Science and Technology of Zeolites and Related Materials, 2004-12-18 *Recent Advances in the Science and Technology of Zeolites and Related Materials* *Microbial Enhancement of Oil Recovery - Recent Advances* E.C. Donaldson, 1991-04-03 This conference was instituted to examine field activities in Microbial Enhancement of Oil Recovery The U S Department of Energy has sponsored several field projects and the details from some of these were presented as well as a few from industry The balance of the program was concerned with new developments in research Today's oil production technology leaves one third to one half of the original oil in place in the reservoir at abandonment of secondary recovery waterflooding This leaves a very large target for microbial enhanced oil recovery which was shown by the research papers of this conference to be capable of producing up to 50% of the residual oil The field trials show that the normal projected oil production decline curve can be reversed or leveled off by microbial enhancement of oil recovery This conference has shown that a variety of applications are possible to correct oilfield problems as well as to enhance oil recovery Among these is the suppression of hydrogen sulfide production which alone is a

tremendous advance because of the large quantity of sour oil production. If hydrogen sulfide production can be curtailed it would increase the value of the produced oil, decrease its toxicity and largely decrease its corrosiveness. All of these would be welcome both in the field and at the petroleum refinery where special precautions must be taken to process sour crude oil. Another very important discovery is the ability of certain bacteria to eliminate paraffin deposition around the producing well and in the tubulars. This is a welcome improvement for many producers who have considerable difficulty in controlling paraffin deposition.

Recent Advances in Environmental Science from the Euro-Mediterranean and Surrounding Regions (3rd Edition) Mohamed Ksibi, Abdelazim Negm, Olfa Hentati, Achraf Ghorbal, Arturo Sousa, Jesus Rodrigo-Comino, Sandeep Panda, José Lopes Velho, Ahmed M. El-Kenawy, Nicola Perilli, 2024-05-03. This edited book includes over one hundred and eighty short papers that were presented during the third edition of EMCEI which was held in Sousse, Tunisia in June 2021. Nowadays, experts as well as most of the general public know that the Mediterranean and surrounding regions are facing

environmental degradation that is accelerating at an unprecedented rate. The main causes are the natural and human induced climate change, increasing pollution, urban growth and the overexploitation and unsustainable use of resources due to rapid population growth. The effects are seen in several indicators such as the warming, more frequent extreme events, severe droughts, water shortages, contraction of natural resources, changes in land use and landscape deterioration, decreasing agricultural yields, biodiversity loss, deterioration of the ecosystems, corrosion of the natural coastal environment, sea level rise and ocean acidification. In addition to these more recent issues, the Mediterranean and surrounding region naturally experience a number of hazards such as floods, droughts, desertification, fires, catastrophic forest diebacks, earthquakes and volcanic eruptions. By presenting a wide range of environmental topics and new findings relevant to a variety of problems in these regions, this book appeals to anyone working in the subject area and especially students interested in learning more about new developments in environmental research initiatives in light of the worsening environmental degradation of the Mediterranean and surrounding areas, making environmental and resource protection an increasingly important issue that impedes sustainable development and social well-being. The book addresses emerging environmental issues along with new challenges by focusing on innovative approaches that contribute to achieving a sustainable environment in and around the Mediterranean Sea and by highlighting to decision makers from relevant sectors the environmental considerations that should be integrated into their own activities.
