Focus on Neurochemistry Research Robert M. Coleman, 2005 The brain is an enormously dynamic organ Even when we sleep connections are made signals sent and messages delivered One of the key ways that the brain operates is via chemical stimuli which permits different parts of the brain to communicate between themselves and with the rest of the body Determining what these chemicals proteins and molecules are is an important way to not only discover how the brain works but provide novel targets that may be useful in the treatment of disease for instance in dealing with memory loss in dementia This new book brings together international research in a broad range of topics including molecular and cellular neurochemistry neuropharmacology and genetic aspects of CNS function neuroimmunology metabolism as well as the neurochemistry of neurological and psychiatric disorders of the CNS

Research Methods in Neurochemistry Neville Marks, 1995-12-31 On picking up this first volume of a new series of books the reader may ask the two questions a why research methods and b why in neurochemistry The answers to these questions are easy they more than justify the volumes to come and show the strong need for their existence It is customary to think of methods as a necessary but unexciting means to an end to relegate advances in methodology to a minor role in the creative original portion of advances in science This is not the case the pace setting function of methodology is well illustrated in most areas of neurobiology To formulate our questions to Nature which is the essence of experimental design methodology is needed to get answers to our questions we have to devise yet new methods The chapters of the present volume fully illustrate how the development of a new method can cut a new path how it can open new fields just as the microscope founded histology Heterogeneity of structures presents a formidable challenge for methodology in the nervous system yet methods for separating the structures are essential if we ever want to decipher the enigma of functional contribution of the elements to the whole The problem is not only physical separation clearly methods are essential to study complex structures in situ
