Recent Trends In Mortality Analysis Studies In Population:

The Life Table Guillaume Wunsch, Michel Mouchart, Josianne Duchêne, 2013-03-09 Guillaume Wunsch Michel Mouchart Josianne Duchene This book is an outcome of the activities of the Working Group on Health Morbidity and Mortality Differentials of the European Association for Population Studies which was chaired for some years by one of the present editors G Wunsch In collaboration with the Institute of Statistics and the Institute of Demography of the University of Louvain this Working Group held a workshop in Louvain la Neuve a few years ago on the use of life tables in Europe taking into account problems of data collection methods and models Some of the participants in the workshop were then invited by the present editors to improve develop or in some cases thoroughly modify their papers in order to transform them into chapters of a book on life tables Though life tables are one of the oldest tools in demography and every textbook on demographic methods deals with the topic of life table construction few books have dealt with the subject in depth It is the hope of the editors that the present volume will fulfill to some extent this need Though primarily written by and for demographers this book will also be of use to actuaries working in life insurance and to epidemiologists dealing with morbidity and cause of death Furthermore a topic such as competing risks theory should also be of interest to statisticians

National Library of Medicine Current Catalog National Library of Medicine (U.S.), **Current Catalog** National Library of Medicine (U.S.), 1983 First multi year cumulation covers six years 1965 70 Vital & Health Statistics, 1964 Vital and Health Statistics, 1983 Applied Demography for Biologists James R. Carey, 1993-02-04 This is the first book to comprehensively apply the fundamental tools and concepts of demography to a nonhuman species It provides clear and concise treatment of standard demographic techniques such as life table analysis and population projection introduces models that have seldom appeared outside of the demographic literature including the multiple decrement life table the intrinsic sex ratio and multiregional demography and addresses demographic problems that are unique to nonhuman organisms such as the demographic theory of social insects and harvesting techniques applied to insect mass rearing The book also contains a synthesis of fundamental properties of population such as momentum and convergence to the stable age distribution with a section on the unity of demographic models and appendices detailing analytical methods used to quantify and model the data gathered in a ground breaking study on the mortality experience of 1 2 million medflies Based on an insect demography course at the University of California Davis the book is intended for practicing entomologists population biologists and ecologists for use in research or as a graduate text **Recent Trends in Mortality Analysis** Kenneth G. Manton, Eric Stallard, 1984 **Formal Demography** David P. Smith, 2013-11-11 This book is intended as a relatively nontechnical introduction to current demographic methods It has been several years in preparation beginning from occasional class handouts I wrote to elaborate on essential points of demographic methodology Its growth from scattered notes to an integrated text was a natural process if a gradual one The content of the book addresses three objectives first I

have tried to avoid demographic methods that are now dated. In some chapters that has meant concentrating on formulas most demographers recognize. In the chapters on life tables it meant testing competing formulas on a variety of real and synthetic data sets and dropping or relegating to footnotes those that were least accurate. Second I have attempted to give readers a sense of the limits of different formulas and methods. I am a terse writer however and for the reader that means most sentences carry weight. Chapters should be read attentively with careful regard to commentary as well as to formulas and examples. Finally I have tried to make the principal methodologies of the book accessible by offering explanations for formulas that are not obvious by keeping examples to the forefront and by placing relatively specialized topics in chapter appendices.

Operations Research '91 Peter Gritzmann, Rainer Hettich, Reiner Horst, Ekkehard Sachs, 2012-12-06 The volume comprises a collection of 172 extended abstracts of talks presented at the 16th Symposium on Operations Research held at the University of Trier in September 1991. Individual-Based Models and Approaches In Ecology D. L. DeAngelis, 2018-01-18 Until fairly recently populations were handled as homogenized averages which made modeling feasible but which ignored the essential fact that in any population there is a great variety of individuals of different ages, sizes and degrees of fitness. Recently because of the increased availability of affordable computer power approaches have been developed which are able to recognize individual differences. Individual based models are of great use in the areas of aquatic ecology, terrestrial ecology, landscape or physiological ecology, terrestrial ecology, landscape or physiological ecology and agriculture. This book discusses which biological problems individual based models can solve as well as the models' inherent limitations. It explores likely future directions of theoretical development in these models as well as currently feasible management applications and the best mathematical approaches and computer languages to use. The book also details specific applications to theory and management.

Gender Imbalance and Marriage Squeeze in China Quanbao Jiang, Shuzhuo Li, 2024-08-21 This book presents a comprehensive analysis of China's imbalanced sex ratio at birth and marriage market and the implications of these phenomena for population development and families. China's persistently high sex ratio at birth (SRB) since the early 1980s has led to serious gender imbalance and male marriage squeeze. After examining the quality of existing data on SRB, the authors provide their estimates of the sex-selective abortion rate, describe the trends and geographical patterns in SRB, and disaggregate changes in SRB by birth order and province. Special attention is given to the number and proportion of missing girls between 1980 and 2010. Based on the quantitative analyses, the book projects the implications of the severe

gender imbalance for China's population development and the future dynamics of the marriage market including trends in age at first marriage the proportion of never married the age structure of surplus males and the life cycle of bare branch families The book will appeal to scholars and students of demography sociology and China studies especially those interested in China's population and contemporary society *Transition and Challenge* Zhongwei Zhao, Fei Guo, 2007-02-22 With the largest population in the world China has experienced significant demographic social and economic changes in recent decades This book examines these changes and also looks at how China's population has altered the global landscape

Health Statistics on Older Persons, United States, 1986 Richard J. Havlik, 1987 Epidemiologic Studies in Cancer Prevention and Screening Anthony B. Miller, 2012-11-30

Epidemiologic Studies in Cancer Prevention and Screening is the first comprehensive overview of the evidence base for both cancer prevention and screening. This book is directed to the many professionals in government, academia, public health, and health care who need up-to-date information on the potential for reducing the impact of cancer, including physicians, nurses, epidemiologists, and research scientists. The main aim of the book is to provide a realistic appraisal of the evidence for both cancer prevention and cancer screening. In addition, the book provides an accounting of the extent programs based on available knowledge have impacted populations. It does this through:

1. Presentation of a rigorous and realistic evaluation of the evidence for population-based interventions in prevention of and screening for cancer with particular relevance to those believed to be applicable now or on the cusp of application.
2. Evaluation of the relative contributions of prevention and screening.
3. Discussion of how within the health systems with which the authors are familiar, prevention and screening for cancer can be enhanced.

Overview of the evidence base for cancer prevention and screening as demonstrated in *Epidemiologic Studies in Cancer Prevention and Screening* is critically important given current debates within the scientific community. Of the five components of cancer control, prevention, early detection, including screening, treatment, rehabilitation, and palliative care, prevention is regarded as the most important. Yet the knowledge available to prevent many cancers is incomplete, and even if we know the main causal factors for a cancer, we often lack the understanding to put this knowledge into effect. Further, with the long natural history of most cancers, it could take many years to make an appreciable impact upon the incidence of the cancer. Because of these facts, many have come to believe that screening has the most potential for reduction of the burden of cancer. Yet, through trying to apply the knowledge gained on screening for cancer, the scientific community has recognized that screening can have major disadvantages and achieve little at substantial cost. This reduces the resources that are potentially available both for prevention and for treatment.
