

T Cell Receptor Structure and Function

Structure

The T cell receptor (TCR) is a transmembrane protein complex, consisting of an α and β chain, each with a variable and constant region. TCRs are associated with CD3 proteins, which mediate signal transduction.

Diversity

TCR diversity is generated through V(D)J recombination, enabling T cells to recognize a wide range of peptide antigens.

Function

TCRs recognize short peptide fragments presented by MHC molecules on antigen-presenting cells (APCs). This interaction initiates T cell activation and differentiation into effector cells.
