**Routledge Handbook of Premodern Japanese History** Karl F. Friday, 2017-07-14 Scholarship on premodern Japan has grown spectacularly over the past four decades in both sophistication and volume The new scholarship sees a higher reliance on primary documents a shift away from the history of elites to broader exploration of social structures and a reexamination of many of the key tenets which were once the received wisdom Providing a primarily historiographical review this handbook highlights the recent innovations and major themes that have developed in the study of premodern Japanese history Covering Japanese history to 1600 The Routledge Handbook of Japanese History is an essential reference work for any student and researcher on Japanese Asian and World History *Knowledge Actors* Johan Östling, David Larsson Heidenblad, Anna Nilsson Hammar, 2023-10-31 Historical actors are as central to the history of knowledge as to all historical scholarship Every country every era has its biographies of eminent scientists intellectuals and educational reformers Yet the theoretical currents that have left their mark on the historical and sociological studies of knowledge since the 1960s have emphasized structures over actors collectives over individuals By contrast *Knowledge Actors* stresses the importance of historical actors and re engages with their actions from fresh perspectives The objective of this volume is thus to foster a larger discussion among historians of knowledge about the role of knowledge actors Do we want individuals and networks to take centre stage in our research narratives And if so which ones do we want to highlight and how are we to conduct our research What are the potential pitfalls of pursuing that actor centric trajectory This the third volume in a trilogy about the history of knowledge from the Lund Centre for the History of Knowledge LUCK **The Cricket-field, Or The History and the Science of the Game of Cricket by the Rev. James Pycroft** James Pycroft, 1862 *Knowledge and Power* William Burns, 2018-07-06 *Knowledge and Power* presents and explores science not as something specifically for scientists but as an integral part of human civilization and traces the development of science through different historical settings from the Middle Ages through to the Cold War Five case studies are examined within this book the creation of modern science by Muslims Christians and Jews in the medieval Mediterranean the global science of the Jesuit order in the early modern world the relationship between modernization and westernization in Russia and Japan from the late seventeenth to the mid nineteenth century the role of science in the European colonization of Africa and the rivalry in big science between the United States and the Soviet Union during the Cold War Each chapter includes original documents to further the reader's understanding and this second edition has been enhanced with a selection of new images and a new chapter on Big Science and the Superpowers during the Cold War Since the Middle Ages people have been working in many civilizations and cultures to advance knowledge of and power over the natural world Through a combination of narrative and primary sources *Knowledge and Power* provides students with an understanding of how different cultures throughout time and across the globe approached science It is ideal for students of world history and the history of science *New Perspectives on the*

*History of Life Sciences and Agriculture* Denise Phillips, Sharon Kingsland, 2015-02-12 This volume explores problems in the history of science at the intersection of life sciences and agriculture from the mid eighteenth to the mid twentieth century Taking a comparative national perspective the book examines agricultural practices in a broad sense including the practices and disciplines devoted to land management forestry soil science and the improvement and management of crops and livestock The life sciences considered include genetics microbiology ecology entomology forestry and deal with US European Russian Japanese Indonesian Chinese contexts The book shows that the investigation of the border zone of life sciences and agriculture raises many interesting questions about how science develops In particular it challenges one to re examine and take seriously the intimate connection between scientific development and the practical goals of managing and improving perhaps even recreating the living world to serve human ends Without close attention to this zone it is not possible to understand the emergence of new disciplines and transformation of old disciplines to evaluate the role and impact of such major figures of science as Humboldt and Mendel or to appreciate how much of the history of modern biology has been driven by national ambitions and imperialist expansion in competition with rival nations Neo-Confucianism and Science in Korea Sang-ho Ro, 2021-02-15 Historians of late premodern Korea have tended to regard it as a hermit kingdom isolated from its neighbours and the wider world In fact as Ro argues in this book Korean intellectuals were heavily influenced by both Chinese Neo Confucianism and the European Enlightenment in the late 18th and 19th centuries In the late Choson period the regime felt threatened by the new more empirical approaches to knowledge emerging from both the East and the West For this reason many Korean intellectuals felt it necessary to work in the shadows and formed secret societies for the study of nature Because of the secrecy of these societies much of their work has remained unknown even in Korea until recent years Ho looks at the work of these intellectuals and analyses the impact their thinking and experimentation had on knowledge production in Korea A fascinating insight into the largely overlooked story of how globalization affected intellectual life in Korea before the 20th century This book will be of great interest to students and researchers of Korean history and of Asian intellectual history more broadly **The cricket field: or, The history and the science of cricket, by the author of 'The principles of scientific batting'.** J. **Renaming Plants and Nations in Japanese Colonial Korea** Jung Lee, 2025-04-10 This book studies a striking example of intensely negotiated colonial scientific practice the case of botanical practice in Korea during the Japanese colonisation from 1910 to 1945 The shared aim of botanists who encountered one another in colonial Korea to practise modern Western botany is successfully revealed through analysis of their fieldwork and subsequent publications By exploring the variations in what that term should mean and the politically charged nature of the interactions between both imperial and colonial players it reveals how botanists of the region created to a form of scientific practice that was neither clearly Western nor particularly modern It shows how the botany that evolved in this context was a product of colonially resourced globally connected practice immersed in intertwined traditions rather than simply a copy of modern Western botany Utilizing extensive primary sources this book will be of interest to students and scholars of the history of science colonial Korean history and environmental history

McCrank, 2001 Here is an extensive review and bibliographic essay backed by 5 000 citations about developments in information technology since the advent of personal computing and the convergence of the disciplines Its focus is on the access preservation and analysis of historical information primarily in electronic form and the relationships between new methodology and instructional media technique and research trends in library special collections digital libraries electronic and data archives and museums

**Making Time** Yulia Frumer, 2018-01-19 What is time made of We might balk at such a question and reply that time is not made of anything it is an abstract and universal phenomenon In Making Time Yulia Frumer upends this assumption using changes in the conceptualization of time in Japan to show that humans perceive time as constructed and concrete In the mid sixteenth century when the first mechanical clocks arrived in Japan from Europe the Japanese found them interesting but useless

because they failed to display time in units that changed their length with the seasons as was customary in Japan at the time. In 1873 however the Japanese government adopted the Western equal hour system as well as Western clocks. Given that Japan carried out this reform during a period of rapid industrial development it would be easy to assume that time consciousness is inherent to the equal hour system and a modern lifestyle but *Making Time* suggests that punctuality and time consciousness are equally possible in a society regulated by a variable hour system arguing that this reform occurred because the equal hour system better reflected a new conception of time as abstract and universal which had been developed in Japan by a narrow circle of astronomers who began seeing time differently as a result of their measurement and calculation practices. Over the course of a few short decades this new way of conceptualizing time spread gradually becoming the only recognized way of treating time.

*Plants in 16th and 17th Century* Fabrizio Baldassarri, 2023-07-04 In the pre modern times while medicine was still relying on classical authorities on herbal remedies a new engagement with the plant world emerged. This volume follows intertwined strands in the study of plants examining newly introduced species that captured physicians curiosity expanded their therapeutic arsenal and challenged their long held medical theories. The development of herbaria the creation of botanical gardens and the inspection of plants contributed to a new understanding of the vegetal world. Increased attention to plants led to account for their therapeutic virtues to test and produce new drugs to recognize the physical properties of plants and to develop a new plant science and medicine.
