Applied Science Robert Bud, 2024-03-20 For almost two centuries the category of applied science was widely taken to be both real and important. Then its use faded. How could an entire category of science appear and disappear? By taking a longue dur e approach to British attitudes across the nineteenth and twentieth centuries Robert Bud explores the scientific and cultural trends that led to such a dramatic rise and fall. He traces the prospects and consequences that gave the term meaning from its origins to its heyday as an elixir to cure many of the economic, cultural and political ills of the UK eventually overtaken by its competitor technology. Bud examines how applied science was shaped by educational and research institutions, sociotechnical imaginaries and political ideologies and explores the extent to which non scientific lay opinion mediated by politicians and newspapers could become a driver in the classification of science. *Education, Technology and Industrial Performance in Europe, 1850-1939* Robert Fox, Anna Guagnini, 1993-07-15 This book examines advanced scientific and technical education in seven European countries and the USA between the mid nineteenth century and the 1930s. It seeks to replace the notion of a simple education industry interaction by a broader perspective where not only educational institutions and industrial employers but also government professional bodies and private patrons have made contributions.

Huxley's Church and Maxwell's Demon Matthew Stanley, 2014-11-24 During the Victorian period the practice of science shifted from a religious context to a naturalistic one. It is generally assumed that this shift occurred because naturalistic science was distinct from and superior to theistic science. Yet as Huxley's Church and Maxwell's Demon reveals most of the methodological values underlying scientific practice were virtually identical for the theists and the naturalists: each agreed on the importance of the uniformity of natural laws, the use of hypothesis and theory, the moral value of science and intellectual freedom. But if scientific naturalism did not rise to dominance because of its methodological superiority then how did it triumph? Matthew Stanley explores the overlap and shift between theistic and naturalistic science through a parallel study of two major scientific figures: James Clerk Maxwell, a devout Christian physicist, and Thomas Henry Huxley, the iconoclast biologist who coined the word agnostic. Both were deeply engaged in the methodological, institutional and political issues that were crucial to the theistic/naturalistic transformation. What Stanley's analysis of these figures reveals is that the scientific naturalists executed a number of strategies over a generation to gain control of the institutions of scientific education and to reimagine the history of their discipline. Rather than a sudden revolution, the similarity between theistic and naturalistic science allowed for a relatively smooth transition in practice from the old guard to the new. *Science Versus Practice* Robert Bud, Gerrylynn K. Roberts, 1984
