Psychic Trauma Theory and Practice covers the many developments in the relatively new field of trauma therapy. It examines the nature of the wide variety of treatments available for traumatized people, describing elements they have in common and those that are specific to each treatment. Originating with the editor's clinical experience working with patients from the former German Democratic Republic, contributors then discuss alternative therapies including ego psychology, self psychology, object relations theory, attachment theory, psychoanalysis, and art therapies. Case studies further illustrate the application and practice. *Approaches to Psychic Trauma* presents a diversity of theories and tools centering on trauma and history, and through the microcosm of individual personalities, one may have a close-up view of how historical events as well as personal narratives and reactions to them consciously and unconsciously affect the individual. *Dissociation in Traumatized Children and Adolescents* Sandra Wieland, 2015-03-27. *Dissociation in Traumatized Children and Adolescents* presents a series of unique and compelling case studies written by some of the foremost international experts in the study of dissociation in young people. In the new edition, chapters have been updated to include discussion of the most recent findings in trauma and neuroscience as well as Joyanna Silberg's popular affect avoidance model. In addition, Sandra Wieland's incisive commentaries on each case study have been updated. Each chapter presents a detailed narrative of a therapist's work with a child or adolescent, interspersed with the therapist's own thought process, and every therapist explains the theory and research behind her clinical decisions. The case studies present many aspects of working with traumatized children: attachment work, trauma processing work with the family, interactions with the community, psychoeducation related to dissociation, and encouragement of communication between the dissociated parts, and provide a frank analysis of the difficulties clinicians encounter in various therapeutic situations. While the book is exceptional in its clear and detailed descriptions of theory related to dissociation in children, most importantly, it illustrates how theory can be translated into successful therapeutic interactions. *Traumatic Injury Research at NIOSH* National Research Council, Institute of Medicine, Board on Population Health and Public Health Practice, Committee to Review the NIOSH Traumatic Injury Research Program, 2009-01-15. The occurrences of both injury and death that take place on the job are a significant public health problem in the United States, causing a substantial human and economic burden. *Traumatic Injury Research at NIOSH* is the sixth report in the series *Reviews of Research Programs of the National Institute for Occupational Safety and Health*. The Committee to Evaluate the NIOSH Traumatic Injury Research Program found the program's research during 1996-2005, the evaluation period for this review, relevant to reducing the burden of traumatic injury in the workplace and to have contributed to improvements in worker health and safety. To continue to reduce injuries and deaths to workers due to trauma, the committee recommended that the TI Research Program continue setting goals within the program's scope and resources, work with other federal agencies that support injury prevention and control research, to outline areas of collaboration, embark on a program to increase the visibility of traumatic injury research, develop a strategic plan for evaluating its research, to

practice efforts and for building the capacity to carry out these efforts and consider research on the safety impacts of changes in the nature of work as well as intervention research targeting organization policies and practices
