Advancing Scientific Research in Education National Research Council, Division of Behavioral and Social Sciences and Education, Center for Education, Committee on Research in Education, 2004-12-22 Transforming education into an evidence based field depends in no small part on a strong base of scientific knowledge to inform educational policy and practice Advancing Scientific Research in Education makes select recommendations for strengthening scientific education research and targets federal agencies professional associations and universities particularly schools of education to take the lead in advancing the field

Progressing Science Education Keith S. Taber, 2009-05-29 Exploring one of the central themes in science education theory this volume examines how science education can be considered as a scientific activity within a broad post positivist notion of science Many students find learning science extremely problematic whatever level of education they have reached

At the end of the 1970s a new approach to tackling learning difficulties in science was developed drawing on ideas from psychology and cognitive science and centred on the way students build up new knowledge in reference to their existing ideas Constructivism became the dominant paradigm in science education research for two decades spawning a vast body of literature reporting aspects of learners ideas in different science topics However Constructivism came under fire as it was recognised that the research did not offer immediate and simple prescriptions for effective science teaching The whole approach was widely criticised in particular by those who saw it as having anti science leanings In this book the notion of scientific research programmes is used to understand the development limitations and potential of constructivism It is shown that constructivist work in science education fits into a coherent programme exploring the contingencies of learning science The author goes further to address criticisms of constructivism evaluate progress in the field and suggest directions for future research It is concluded that constructivism has provided the foundations for a progressive research programme that continues to guide enquiry into learning and teaching science

Discipline-Based Education Research

Stephanie Slater, Timothy Slater, Inge Heyer, Janelle Bailey, 2015-07-16 This expanded and updated second edition book is written for scientists who want to learn more about how science education research is done and how to get started in discipline based education research It provides the reader with an introduction to the philosophical and practical differences between more familiar traditional scientific research and the more unfamiliar domain of sociological research Readers will learn about the most robust ideas in education research which serve as jumping off points in their new forays into the realm of discipline based education research Quantitative interpretive and action research methods are introduced with real life easy to follow examples The authors long time contributors to the science education community provide rubber meets the road guidance to both first time and experienced researchers to get projects off the ground with the goals of improving classroom practice and contributing to the knowledge base on the teaching and learning of science Discipline based education research is much like traditional scientific research in that using different instruments sometimes results in unexpected answers As an example the cover image uniquely reveals vastly different information about flowers when viewed in visible light upper left and in ultraviolet light lower right In much the same way carefully planned and well executed discipline based education research using a variety of research lenses has the ability to yield unexpected insight into teaching and learning that can benefit all of us
