Traveling with the Atom Glen E Rodgers, 2020 Traveling with the Atom is a historical travel guide to the development of one of the most significant and enduring ideas in the history of humankind the atomic concept This history covers the notable places and landmarks commemorating this achievement visiting homesteads graveyards laboratories apartments abbeys and castles through picturesque rural villages and working class municipalities From Montreal to Manchester via some of the most elegant and romantic cities in Europe Traveling with the Atom guides the reader on a trip through the lives and minds of the great thinkers who collectively unveiled the mystery of the atom Fully illustrated and interspersed with intriguing and insightful notes throughout this book is an ideal companion for the wandering scientist their students friends and companions or quintessential fireside reading for lovers of science and travel

Eurekas and Euphorias Walter Gratzer, Walter Bruno Gratzer, 2004 The march of science has never proceeded smoothly It has been marked through the years by episodes of drama and comedy of failure as well as triumph by outrageous strokes of luck deserved and undeserved and sometimes by human tragedy It has seen deep intellectual friendships as well as ferocious animosities and once in a while acts of theft and malice deceit and even a hoax or two Scientists come in all shapes the obsessive and the dilettantish the genial the envious the preternaturally brilliant and the slow witted who sometimes see further in the end the open minded and the intolerant recluses and arrivistes From the death of Archimedes at the hands of an irritated Roman soldier to the concoction of a superconducting witches brew at the very close of the twentieth century the stories in *Eurekas and Euphorias* pour out told with wit and relish by Walter Gratzer Open this book at random and you may chance on the clumsy chemist who breaks a thermometer in a reaction vat and finds mercury to be the

catalyst that starts the modern dyestuff industry or a famous physicist dissolving his gold Nobel Prize medal in acid to prevent it from falling into the hands of the Nazis recovering it when the war ends mathematicians and physicists diverting themselves in prison cells and even in a madhouse by creating startling advances in their subject We witness the careers sometimes tragic sometimes carefree of the great women mathematicians from Hypatia of Alexandria to Sophie Germain in France and Sonia Kovalevskaya in Russia and Sweden and then Marie Curie's relentless battle with the French Academy Here then a glorious parade unfolds to delight the reader with stories to astonish to instruct and most especially to entertain

Nature's Robots, 2003-11-27 Proteins are amazingly versatile molecules They make the chemical reactions happen that form the basis for life they transmit signals in the body they identify and kill foreign invaders they form the engines that make us move they record visual images All of this is now common knowledge but it was not so a hundred years ago *Nature's Robots* is an authoritative history of protein science from the origins of protein research in the nineteenth century when the chemical constitution of protein was first studied and heatedly debated and when there was as yet no glimmer of the functional potential of substances in the protein category to the determination of the first structures of individual proteins at atomic resolution when positions of individual atoms were first specified exactly and bonding between neighbouring atoms precisely defined Tanford and Reynolds who themselves made major contributions to the golden age of protein science have written a remarkably vivid account of this history It is a fascinating story involving heroes from the past working mostly alone or in small groups usually with little support from formal research groups It is also a story that embraces a number of historically important scientific controversies Written in clear and accessible prose *Nature's Robots* will appeal to general readers with an interest in popular science in addition to professional scientists and historians of science

Life in the Market Ecosystem Stuart K. Hayashi, 2014-11-13 *Life in the Market Ecosystem* the second book in the *Nature of Liberty* trilogy confronts evolutionary psychology head on It describes the evolutionary psychologists theory of gene culture co evolution which states that although customs and culture are not predetermined by anyone's genetic makeup one's practice of a custom can influence the likelihood of that person having children and grandchildren Therefore according to the theory customs count as evolutionary adaptations Extending that theory further as entire systems of political economy capitalism socialism and hunter gatherer subsistence consist of multiple customs and institutions it follows that an entire political economic system can likewise be classified as an evolutionary adaptation Considering that liberal republican capitalism has insofar as the system has been implemented done more to reduce the mortality rate and secure human fertility than other models of societal structure it stands to reason that liberal republican capitalism is itself a beneficent evolutionary adaptation Moreover as essential tenets of Rand's Objectivism individualism observation based rationality and peaceable self interest have been integral to the development of the capitalist ecosystem important aspects of the Objectivism are worthwhile adaptations as well This book shall uphold that position as well as combat critiques by evolutionary psychologists and

environmentalists who denounce capitalism as self destructive Instead capitalism is the most sustainable and fairest political model This book argues that of all the philosophies Objectivism is the one that is most fit for humanity *Kate Chopin's Private Papers* Emily Toth, Per Seyersted, 1998-10-22 Toth and Seyersted's well organized carefully edited volume makes available all manuscripts and related items from all archival collections This volume is essential for American literature collections Choice An edition of the primarily unpublished papers of Kate Chopin author of the feminist classic *The Awakening* These papers illuminate the growth of Chopin as a writer reveal the reactions of critics to her work and settle a number of controversies in Chopin studies **History in Mathematics Education** John Fauvel, J.A. van Maanen, 2000-07-31 This ground breaking book investigates how the learning and teaching of mathematics can be improved through integrating the history of mathematics into all aspects of mathematics education lessons homework texts lectures projects assessment and curricula It draws upon evidence from the experience of teachers as well as national curricula textbooks teacher education practices and research perspectives across the world It includes a 300 item annotated bibliography of recent work in the field in eight languages 5th International Conference on History of Chemistry Isabel Malaquias, Ernst Homburg (historisch chemicus), Maria Elvira Callapez, 2006 **Subject Guide to Books in Print**, 1993

Whitaker's Books in Print, 1998 **Hugh Miller and the Controversies of Victorian Science** Hugh Miller, 1996 It is rare nowadays to come upon an undeservedly neglected figure from Britain's Victorian age but Hugh Miller 1802-56 the subject of this book is certainly one such Admired in his time by such celebrated thinkers as Charles Darwin Charles Dickens and Thomas Carlyle Hugh Miller's many books on science literature and religion sold in tens of thousands of copies winning admirers around the world This collection of essays offers the first modern assessment of Miller his life and work and reveals one of the most fascinating and baffling men of his day Reference Books Bulletin, 1993-1994 Sandy Whiteley, 1994

Reference and Subscription Books Reviews, 1990 **The Idea of Europe in British Travel Narratives, 1789-1914** Katarina Gephardt, 2016-03-03 The nineteenth century was the heyday of travel with Britons continually reassessing their own culture in relation to not only the colonized but also other Europeans especially the ones that they encountered on the southern and eastern peripheries of the continent Offering illustrative case studies Katarina Gephardt shows how specific rhetorical strategies used in contemporary travel writing produced popular fictional representations of continental Europe in the works of Ann Radcliffe Lord Byron Charles Dickens and Bram Stoker She examines a wide range of autobiographical and fictional travel narratives to demonstrate that the imaginative geographies underpinning British ideas of Europe emerged from the spaces between fact and fiction Adding texture to her study are her analyses of the visual dimensions of cross cultural representation and of the role of evolving technologies in defining a shared set of rhetorical strategies Gephardt argues that British writers envisioned their country simultaneously as distinct from the Continent and as a part of Europe anticipating the contradictory British discourse around European integration that involves both fear that the

European super state will violate British sovereignty and a desire to play a more central role in the European Union *The*
