Philosophy, Rhetoric, and the End of Knowledge Steve Fuller, James H. Collier, 2003-12-08 In this second edition of Steve Fuller's original work *Philosophy Rhetoric and the End of Knowledge* A New Beginning for Science and Technology Studies James Collier joins Fuller in developing an updated and accessible

version of Fuller's classic volume *The New Edition* shifts focus slightly to balance the discussions of theory and practice and the writing style is oriented to advanced students. It addresses the contemporary problems of knowledge to develop the basis for a more publicly accountable science. The resources of social epistemology are deployed to provide a positive agenda of research teaching and political action designed to bring out the best in both the ancient discipline of rhetoric and the emerging field of science and technology studies (STS). The authors reclaim and integrate STS and rhetoric to explore the problems of knowledge as a social process, problems of increasing public interest that extend beyond traditional disciplinary resources. In so doing, the differences among disciplines must be questioned; the exercise of STS and the disciplinary boundaries must be renegotiated; the exercise of rhetoric. This book innovatively integrates a sophisticated theoretical approach to the social processes of creating knowledge with a developing pedagogical apparatus. The thought questions at the end of each chapter, the postscript, and the appendix allow the reader to actively engage the text in order to discuss and apply its theoretical insights. Creating new standards for interdisciplinary scholarship and communication, the authors bring numerous disciplines into conversation in formulating a new kind of rhetoric geared toward greater democratic participation in the knowledge-making process. This volume is intended for students and scholars in rhetoric of science, science studies, philosophy, and communication and will be of interest in English, sociology, and knowledge management arenas as well.

Researching Information Systems and Computing Briony J. Oates, 2006. With everything readers need to know about how to execute their research project, this book is written specifically for information systems (IS) and computing students. It introduces key quantitative and qualitative research methods, makes sense of underlying philosophies, and will help readers navigate and assess existing published academic papers. Throughout, readers are supported by pedagogical features such as learning objectives, explanations, discussion questions, evaluation guides, and suggestions for further reading. *Science* Steve Fuller, 1997. *SCIENCE* features a report written in the persona of a Martian anthropologist who systematically compares religious and scientific institutions on Earth only to find that science does not necessarily live up to its own ideals of rationality, thereby risking its purpose by the role it increasingly plays in the maintenance of social and economic order.

Official Program ... Annual Conference of the International Communication Association International Communication Association. Annual Conference, 1997. **Scientific Communication** Han Yu, Kathryn M. Northcut, 2017-09-18. This book addresses the roles and challenges of people who communicate science, who work with scientists, and who teach STEM majors how to write. In terms of practice and theory, chapters address themes encountered by scientists and communicators, including ethical challenges, visual displays, and communication with publics as well as changed and changing contexts and genres. The pedagogy section covers topics important to instructors: everyday teaching as well as longer-term curricular development. Chapters address delivery of rhetorically informed instruction, communication from experts to the public, writing, assessment, online teaching, and communication-intensive pedagogies and curricula.
