Cairns, Lars-Goran Nilsson, Lars Nystedt, 2000-01-01 This book is the outcome of a symposium where leading researchers mainly in developmental psychology came together to discuss the implications of the emerging developmental science and the holistic approach In doing this the authors wanted to honor a distinguished colleague David Magnusson and his career long contributions to this field The purpose of the book is to discuss the profound implications for developmental science of the holistic paradigm especially with regard to the individual development within psychology Against the background of their own empirical theoretical or methodological research the authors have tried to identify what is needed for the developmental theory and methods within this paradigm and discuss possibilities and limitations in relation to conventional approaches

*Sociocultural Theory and the Pedagogical Imperative in L2 Education* James P. Lantolf, Matthew E. Poehner, 2014-03-05 Explicating clearly and concisely the full implication of a praxis oriented language pedagogy this book argues for an approach to language teaching grounded in a significant scientific theory of human learning a stance that rejects the consumer approach to theory and the dichotomy between theory and practice that dominates SLA and language teaching This approach is based on Vygotsky's sociocultural theory according to which the two activities are inherently connected so that each is necessarily rooted in the other practice is the research laboratory where the theory is tested From the perspective of language education this is what is meant by the pedagogical imperative Sociocultural Theory and the Pedagogical Imperative in L2 Education Elaborates a new approach to dealing with the relationship between theory and practice an approach grounded in praxis the dialectical unity of theory and practice Presents an analysis of empirical research illustrating praxis based principles in real language classrooms Brings together cognitive linguistics and sociocultural theory the former provides the theoretical knowledge of language required of praxis and the latter furnishes the theoretical principles of learning and development also called for in a praxis approach Offers recommendations for redesigning teacher education programs Its timely focus on the theory practice gap in language education and its original approach to bridging it put this book at the cutting edge of thinking about Vygotskian sociocultural theory in applied linguistics and SLA

**Fringe or Central to Psychological Science** Danielle Sulikowski, 2016-08-08 The computational theory of mind which views the brain as an information processor that operates on cognitive representations is central to modern cognitive psychology and is the dominant perspective from which brain function is conceptualized and studied Evolutionary Psychology EP is the application of evolutionary theory to understanding human behaviour and cognition Unlike other core Psychology topic areas such as Personality Learning or Developmental Psychology however EP is not defined by the subset of psychological phenomena it seeks to describe and understand It is instead defined by a specific meta theoretical perspective from which it seeks to potentially explain all psychological phenomena The central question posed by this volume is whether this over arching nature provides an opportunity for evolutionary approaches to offer an alternative meta theoretical perspective to the information processing representational view of brain function and behavior **SCIENTIST IN THE**
