*Ancient Greek and Roman Science* Liba Taub, 2023-04-25 Very Short Introductions Brilliant Sharp Inspiring Ancient Greece is often considered to be the birthplace of science and medicine and the explanation of natural phenomena without recourse to supernatural causes The early natural philosophers lovers of wisdom concerning nature sought to explain the order and composition of the world and how we come to know it They were particularly interested in what exists and how it is ordered ontology and cosmology They were also concerned with how we come to know epistemology and how best to live ethics At the same time the scientific thinkers of early Greece and Rome were also influenced by ideas from other parts of the world and incorporated aspects of Egyptian Babylonian and Indian science and mathematics in their studies In this Very Short Introduction Liba Taub gives an overview of the major developments in early science between the 8th century BCE and 6th century CE Focussing on Greece and Rome Taub challenges a number of modern misconceptions about science in the classical world which has often been viewed with a modern lens and by modern scientists such as the misconception that little empirical work was conducted or that the Romans did not do science unlike the Greeks Beginning with the scientific notions of Thales Pythagoras Parmenides and other Presocratics she moves on to Plato and Aristotle before considering Hellenistic science the influence of the Stoics and Epicurean ideas and the works of Pliny the Elder Eratosthenes and Ptolemy In her sweeping discussion Taub explores the richness and creativity of ideas concerning the natural world and the influence these ideas have had on later centuries
