Secure Transaction Protocol Analysis Qingfeng Chen, Chengqi Zhang, Shichao Zhang, 2008-07-20 The application of formal methods to security protocol analysis has attracted increasing attention in the past two decades and recently has been showing signs of new maturity and consolidation The development of these formal methods is motivated by the hostile nature of some aspects of the network and the persistent efforts of intruders and has been widely discussed among researchers in this field Contributions to the investigation of novel and efficient ideas and techniques have been made through some important conferences and journals such as ESORICS CSFW and ACM Transactions in Computer Systems Thus formal methods have played an important role in a variety of applications such as discrete system analysis for cryptographic protocols belief logics and state exploration tools A complicated security protocol can be abstracted as a manipulation of symbols and structures composed by symbols The analysis of e-commerce electronic commerce protocols is a particular case of such symbol systems There have been considerable efforts in developing a number of tools for ensuring the security of protocols both specialized and general purpose such as belief logic and process algebras The application of formal methods starts with the analysis of key distribution protocols for communication between two principals at an early stage With the performance of transactions coming more and more dependent on computer networks and cryptography becoming more widely deployed the type of application becomes more varied and complicated The emerging complex network based transactions such as financial transactions and secure group communication have not only brought innovations to the current business practice but they also pose a big challenge to protect the information transmitted over the open network from malicious attacks

**Secured Transactions Law Reform** Louise Gullifer, Orkun Akseli, 2016-10-20

Secured transactions law has been subjected to a close scrutiny over the last two decades. One of the main reasons for this is the importance of availability of credit and the consequent need to reform collateral laws in order to improve access to finance. The ability to give security effectively influences not only the cost of credit but also in some cases whether credit will be available at all. This requires rules that are transparent and readily accessible to non-lawyers as well as rules that recognise the needs of small and medium-sized enterprises. This book critically engages with the challenges posed by inefficient secured credit laws. It offers a comparative analysis of the reasons and the needs for a secured transactions law reform as well as discussion of the steps taken in many common law, civil law and mixed law jurisdictions. The book, written under the auspices of the Secured Transactions Law Reform Project, informs the debate about reform and advances novel arguments written by world-renowned experts that will build upon the existing literature and as such will be of interest to academics, legal practitioners and the judiciary involved in secured transactions law around the world. The text considers reform initiatives that have taken place up to the end of April 2016. It has not been possible to incorporate events since then into the discussion. However, notable developments include the banks decree passed by the Italian Government on 29th June 2016 and the adoption of the Model Law on Secured Transactions by UNCITRAL on 1st July 2016.

**Secured Transactions Law in Asia** Louise Gullifer, Dora Neo, 2021-03-25. This collection of essays offers a unique insight and overview of the secured transactions law in many of the most important countries in Asia as well as reflections on the need for benefits of and challenges for reform in this area of the law. The book provides a mixture of general reflections on the history, successes and challenges of secured transaction law reform and critical discussion of the law in a number of Asian countries. In some of the countries, the law has already been reformed or reform is under way and here the reforms are considered critically with recommendations for future work. In other countries, the law is not yet reformed and the existing law is analysed so as to determine what reform is desirable and whether it is likely to take place. First, this book will enable those engaging with the law in Asia to understand better the contours of the law in both civil and common law jurisdictions. Second, it provides analytical insights into why secured transactions law reform happens or does not happen, the different methods by which reform takes place, the benefits of reform and the difficulties that need to be overcome for successful reform. Third, it discusses the need for reform where none has yet taken place and critically assesses the reforms which have already been enacted or are being considered. In addition to providing a forum for discussion in relation to the countries in question, this book is also a timely contribution to the wider debate on secured transactions law reform which is taking place around the world.
