Rock Mechanics: Achievements and Ambitions Meifeng Cai,2011-09-22 Rock Mechanics Achievements and Ambitions contains the papers accepted for the 2nd ISRM International Young Scholars Symposium on Rock Mechanics which was sponsored by the ISRM and held on 14 16 October 2011 in Beijing China immediately preceding the 12th ISRM Congress on Rock Mechanics Highlighting the work of young teachers researchers and practitioners the present work provides an important stimulus for the next generation of rock engineers because in the future there will be more emphasis on the use of the Earth s resources and their sustainability and more accountability of engineers decisions In this context it is entirely appropriate that the Symposium venue for the young scholars was in China because of the rock mechanics related work that is anticipated in the future For example in the Chinese Academy of Sciences report Energy Science and Technology in China A Roadmap to 2050 it is predicted that China s

total energy demand will reach 31 45 61 and 66 x 108 tce tonnes of coal equivalent in 2010 2020 2035 2050 The associated per capita energy consumption for the same years is estimated at 2 3 3 1 4 1 and 4 6 tce This increasing demand will be met inter alia by the continued operation and development of new coal mines hydroelectric plants and nuclear power stations with one or more underground nuclear waste repositories all of which will be improved by more modern methods of rock engineering design developed by young scholars In particular enhanced methods of site investigation rock characterisation rock failure understanding computer modelling and rock excavation and support are needed The topics in the book include contributions on Field investigation and observation Rock constitutive relations and property testing Numerical and physical modeling for rock engineering Information technology artificial intelligence and other advanced techniques Underground and surface excavation and reinforcement techniques Dynamic rock mechanics and blasting Predication and prevention of geo environmental hazard Case studies of typical rock engineering Many of the 200 papers address these topics and demonstrate the skills of the young scholars indicating that we can be confident in the continuing development of rock mechanics and rock engineering leading to more efficient safer and economical structures built on and in rock masses Rock Mechanics Achievements and Ambitions will appeal to professionals engineers and academics in rock mechanics rock engineering tunnelling mining earthquake engineering rock dynamics and geotechnical engineering **KWIC Index of Rock Mechanics Literature** J P Jenkins, E. T. Brown, 2016-06-03 KWIC Index of Rock Mechanics Literature Part 2 1969 1976 is an index of subjects in rock mechanics The KWIC keyword in context index is produced by cyclic permutation of significant words in the title of the publication The text covers materials in rock mechanics and geomechanics published around the 70s The book will be of great use to students researchers and practitioners of geological sciences **Frontiers of Rock Mechanics and Sustainable Development in the 21st Century** Wang Sijing, Fu Bingjun, Li Zhonkui, 2020-12-17 These proceedings contain the scientific contributions presented at the 2nd Asian Rock Mechanics Symposium ISRM 2001 2nd ARMS The theme of the symposium was Frontiers of Rock Mechanics and Sustainable Development in the 21st Century **Rock Mechanics in Civil and Environmental Engineering** Jian Zhao, Vincent Labiouse, Jean-Paul Dudt, Jean-Francois Mathier, 2010-05-19 During the last two decades rock mechanics in Europe has been undergoing some major transformation The reduction of mining activities in Europe affects heavily on rock mechanics teaching and research at universities and institutes At the same time new emerging activities notably underground infrastructure construction geothermal energy developo **New Developments in Mining Engineering 2015** Genadiy Pivnyak, Volodymyr Bondarenko, Iryna Kovalevska, 2015-12-18 This annual series of books includes scientific papers on mining profiles This volume presents multiple aspects of mining technology implementation in several aspects extraction of coal iron manganese uranium and other ores Capturing and utilization of coalbed methane by various methods including alternative ones safety measures in mining ecological aspects etc Specific attention is paid to intensification of mineral resources extraction processes by way of modernizing opening methods development and mining

methods depending on mining geological conditions Experimental results of stress strain state rock massif forecast by means of computational experiments using recursive methods are also discussed Any mining operations should finally result in adequate recovery of land surface and utilization of mining wastes using various environmentally friendly methods thus sufficient attention is paid to this scientific trend Non traditional methods of minerals mining are becoming more topical and of higher demand in the modern society Hence several papers chapters are devoted to underground coal gasification and its subsequent processes In addition extraction technologies of gas hydrate as a source of an abundant amount of natural gas are thoroughly examined in this book including implementation of gas hydrate technologies for mine methane utilizations with its following transportation in a solid state Furthermore attention is given to evaluation of economic efficiency of minerals mining by the proposed methods their ways of enrichment ecological aspects and the influence of mining production on the environment innovational logistic solutions at mining enterprises and also to perspectives of Ukraine s mining industry integration to the European standards

Geomining

Azer Shukurov,Oksana Vovk,Artur Zaporozhets,Natalia Zuievskaya,2024-10-02 This book represents a comprehensive exploration of the intricate intersection between geology and mining through the lens of system oriented perspectives Geomining stands at the forefront of modern resource extraction blending the principles of geology engineering transport and environmental science to optimize the

extraction of minerals and other valuable resources from the Earth's crust. It is a dynamic field that continually evolves in response to technological advancements, environmental concerns, and economic realities. In this book, we aim to capture the essence of geomining as a holistic system, emphasizing the interconnectedness of its various components and the importance of integrated approaches to resource management. The geomining industry is a complex of heavy industry sectors that includes the exploration of mineral deposits, the extraction of minerals from the Earth's subsurface, and the enrichment of valuable minerals. Among the main groups of the geomining industry, the following are distinguished: fuel extraction (coal, oil, shale, peat), natural gas extraction, ore mining (iron ore, manganese ore, extraction of non-ferrous ores, precious and rare metals, etc.), mining and chemical industry (extraction of potassium salts, rock salt, apatites, nephelines, bauxites, sulfur, phosphorites, etc.), extraction of mineral raw materials for the construction industry, extraction of mineral raw materials for refractory and ceramic industries, hydrometallurgical activities. The concept of a system-oriented view on geomining recognizes that mining activities do not occur in isolation but are part of larger interconnected systems that encompass geological, environmental, social, and economic dimensions. By adopting a systems perspective, we can better understand the complexities inherent in resource extraction and develop more sustainable and efficient mining practices. This book is divided into 3 parts, each focusing on different aspects of geomining from a systems perspective.
