Earthquake Damaged Concrete and Masonry Wall Buildings (FEMA 308) Federal Emergency Agency, 2013-04-13

Following the two damaging California earthquakes in 1989 Loma Prieta and 1994 Northridge many concrete wall and masonry wall buildings were repaired using federal disaster assistance funding The repairs were based on inconsistent criteria giving rise to controversy regarding criteria for the repair of cracked concrete and masonry wall buildings To help resolve this controversy the Federal Emergency Management Agency FEMA initiated a project on evaluation and repair of

earthquake damaged concrete and masonry wall buildings in 1996 The ATC 43 project addresses the investigation and evaluation of earthquake damage and discusses policy issues related to the repair and upgrade of earthquake damaged buildings The project deals with buildings whose primary lateral force resisting systems consist of concrete or masonry bearing walls with flexible or rigid diaphragms or whose vertical load bearing systems consist of concrete or steel frames with concrete or masonry infill panels The intended audience is design engineers building owners building regulatory officials and government agencies The project results are reported in three documents TheFEMA306report Evaluation of Earthquake Damaged Concrete and Masonry Wall Buildings Basic Procedures Manual provides guidance on evaluating damage and analyzing future performance Included in the document are component damage classification guides and test and inspection guides FEMA 307 Evaluation of Earthquake Damaged Concrete and Masonry Wall Buildings Technical Resources contains supplemental information including results from a theoretical analysis of the effects of prior damage on single degree of freedom mathematical models additional background information on the component guides and an example of the application of the basic procedures FEMA 308 The Repair of Earthquake Damaged Concrete and Masonry Wall Buildings discusses the policy issues pertaining to the repair of earthquake damaged buildings and illustrates how the procedures developed for the project can be used to provide a technically sound basis for policy decisions It also provides guidance for the repair of damaged components
