Seven Figure Trigonometric Tables

Ivor Grattan-Guinness

Seven Figure Trigonometric Tables:

Six-Figure Tables of Trigonometric Functions L. S. Khrenov, 2014-06-16 THE PRESENT six figure trigonometric tables complete the series of tables of the natural values of the trigonometric functions published by Fizmatgiz Now that small computers have become very widely available almost all computations are carried out by machine and the majority of computational schemes are suited to this purpose The situation calls urgently for the availability of tables containing the natural values of all six trigonometric functions The following special factor emerges here In logarithmic computations the same relative accuracy is guaranteed more or less automatically for all values of the argument the number of correct significant figures in the result is either equal to or in rare cases one less than the number of significant figures in the mantissa of the logarithm In computations with natural values of the functions the same relative accuracy is guaranteed in practice for all arguments only by having a constant number of significant figures throughout the tables Until recently however tables of the natural values of the trigonometric functions have been compiled both in Russia and abroad with the same number of places after the decimal point which leads to a loss of accuracy when computing with functions of small angles In view of this there is an urgent need for tables of the natural values of the trigonometric functions with a constant number of significant figures which substantially guarantees roughly the same relative accuracy for all angles The present tables together with the following already published by Fizmatgiz Five figure Tables L S Khrenov 1954 Five figure Tables with the Argument in Time L S Khrenov 1954 Seven figure Tables L S Khrenov 1956 and Six figure Tables with the Argument in Time S A Angelov 1957 form a complete series with the same number of significant figures satisfying the main requirements of a wide variety of computers When compiling the present tables use was made for purposes of collation of the following tables of the natural values of the trigonometric functions The Five figure Table of H Andoyer Paris 1915 1918 the Eight figure Table of J Peters Berlin 1939 the Seven figure Table of L S Khrenov 2nd ed Gostekhizdat 1956 the Seven figure Table of H C Ives and the Eight figure Tables of the Logarithm of Numbers and of the Trigonometric functions of J Bauschinger and J Peters Geodezizdat 1942 and 1944 Drawing the Line Edwin Danson, 2001 Set in the social and historical context of pre Revolutionary America this book is a spellbinding account of one of the great and historic achievements of its time BOOK JACKET **A Treatise on Plane and Spherical Trigonometry** William Chauvenet, 1863 *Tables of Trigonometric Functions* United States. Greenwich has been a centre for scientific computing since the foundation of the Royal Observatory in 1675 Early
Astronomers Royal gathered astronomical data with the purpose of enabling navigators to compute their longitude at sea
Nevil Maskelyne in the 18th century organised the work of computing tables for the Nautical Almanac anticipating later
methods used in safety critical computing systems The 19th century saw influential critiques of Charles Babbage's
mechanical calculating engines and in the 20th century Leslie Comrie and others pioneered the automation of computation
The arrival of the Royal Naval College in 1873 and the University of Greenwich in 1999 has brought more mathematicians
and different kinds of mathematics to Greenwich In the 21st century computational mathematics has found many new
applications This book presents an account of the mathematicians who worked at Greenwich and their achievements
Features A scholarly but accessible history of mathematics at Greenwich from the seventeenth century to the present day
with each chapter written by an expert in the field The book will appeal to astronomical and naval historians as well as
historians of mathematics and scientific computing Companion Encyclopedia of the History and Philosophy of the

in southern Iraq Since then tables have been an important feature of mathematical activity table making and printed tabular
matter are important precursors to modern computing and information processing This book contains a series of articles
summarising the technical institutional and intellectual history of mathematical tables from earliest times until the late
twentieth century It covers mathematical tables the most important computing aid for several hundred years until the 1960s
data tables eg Census tables professional tables eg insurance tables and spreadsheets the most recent tabular innovation The
book is presented in a scholarly yet accessible way making appropriate use of text boxes and illustrations Each chapter has a
frontispiece featuring a table along with a small illustration of the source where the table was first displayed Most chapters
have sidebars telling a short story or history relating to the chapter The aim of this edited volume is to capture the history of
tables through eleven chapters written by subject specialists The contributors describe the various information processing
techniques and artefacts whose unifying concept is the mathematical table *Bureau of Standards Journal of Research*
