New Global Ict-Based Business Models Peter Lindgren, 2022-09-01 The New Global Business model NEWGIBM book describes the background theory references case studies results and learning

imparted by the NEWGIBM project which is supported by ICT to a research group during the period from 2005-2011. The book is a result of the efforts and the collaborative work between SMEs, consultancies and researchers across various lines of business competences and research domains. The book commences with a theoretical discussion of the business model and its innovation literature and explains how this was a collaborative study by researchers from three Danish Universities. The book continues by describing, analyzing and showing how NEWGIBM was implemented in SMEs in different industrial companies networks. Based on this effort, the researchers try to describe and analyze the current context, experience of NEWGIBM and finally the emerging scenarios of NEWGIBM. The NEWGIBM book serves as a part of the final evaluation and documentation of the NEWGIBM project and is supported by results from the following projects: M-commerce, Global Innovation, Global E-business, M-commerce, The Blue Ocean project, International Center for Innovation and Women in Business, NEFFICS which provided information about the innovating business models funded by Ministry of Science and Innovation, Denmark, Ministry of Economics, Denmark, EU Social Fund, EU KASK program and EU 7 Framework program, Internet of Things. This book adds new knowledge to the global business models based on ICT.

Monetizing Data Stephan Liozu, Wolfgang Ulaga, 2018-10-30. The Digital revolution promises trillions of dollars in created value by 2030. Consultants and researchers are projecting massive and disruptive disruption in entire industrial sectors. As a result, PwC reports in their Digital IQ report that 73% of executives say that they are investing in internet of things (IoT) and 54% in artificial intelligence. So we are experiencing a deluge of digital investments, programs and large scale transformations. Despite this tsunami of activities, many IoT initiatives stall in the Proof of Concept phase and few are already considered a success. Recently, Siemens revealed that less than a fifth (18%) of surveyed companies analyze more than 60% of production data they collect. In a similar vein, Simon Kucher Partners (SKP) reports that 3 out of 4 firms that invested in digitalization in the past 3 years fail in their efforts due to the lack of monetization strategies, the focus on the wrong priorities, the lack of customer intimacy and the neglect of digital pricing best practices. In fact, only 18% of these firms are true digital heroes. Despite the high level of interest and investments, the reality is that most companies are just getting started. The digital champions are not yet reaping the fruit of their investments. Most companies tend to struggle with the

process of designing digital business models with the development of truly differentiated offers and with the monetization and pricing of their data based offers This book focuses on the topics of data monetization and of the value based pricing of data driven offers The authors introduces a newly developed practical data monetization roadmap that can be used by digital project teams incubators and digital factories to better frame their offers and to apply the principles of value based pricing They present options in digital pricing models and practical guidelines on how to deploy them Readers will learn The various monetization and value creation models for data enabled offers The 8 steps of the data monetization framework The best practices in designing differentiated data enabled offers The value based pricing of data and options in digital pricing models Business model implications of switching from ownership to consumption model
